Update Alert

The Snap Beans for Processing table on page 70 was corrected. Changes were made to price and value for MI and US for all processed and freezing and canning totals.

The US Price and Value by Crop on page 65 and the US Price and Value by State on page 68 were corrected based on the corrections mentioned above.

The Leading Processing Vegetable States table on page 64 was corrected based on the corrections mentioned above.

The Vegetables for Processing, Area and Production by Type of Procurement table on page 80 was corrected for 2000 snap beans.

Vegetable Program Changes

For the 2000 crop year many changes occurred to the National Vegetable Estimation Program. Nine new commodities were added to the program, some States were added, some were dropped, and some States were discontinued for the seasonal forecasts but remained in the program on an annual basis. When comparing 2000 data to 1999 data comparable States should be used as noted in the table footnotes. If you need assistance, contact Biz Wallingsford at (202) 720-2157 or Debbie Flippin at (202) 720-3250.

2000 Fresh Market Vegetable Production Estimated at 482 Million Hundredweight

Fresh market vegetable and melon production for the 34 selected crops in 2000 totaled 482 million hundredweight. Value of the 2000 crop was estimated at 9.33 billion dollars, while harvested area covered 2.10 million acres.

Fresh market vegetable and melon production for 25 selected crops in 2000 totaled 455 million hundredweight. Value of the 2000 crop was estimated at 8.72 billion dollars. Harvested area covered 1.92 million acres. The three largest crops in terms of production were head lettuce, onions, and watermelon, which combined to account for 40 percent of the total production. Head lettuce, tomatoes, and onions were the most valuable crops, accounting for 36 percent of the total value when combined.

The nine new crops are collard greens, kale, mustard greens, turnip greens, okra, chile peppers, pumpkins, radishes, and squash. Harvested acres of the new crops are estimated at 172,520 acres. Production is estimated at 27.4 million hundredweight. Total value is estimated at 607 million dollars. Pumpkins and squash lead in production, accounting for 64 percent of production for the nine new crops. Squash and chile peppers are the most valuable of the new crops, accounting for 54 percent of the new crop value.

For all 34 vegetables and melons, California continued to be the leading fresh market State, accounting for 43 percent of the harvested area, 48 percent of production, and 53 percent of the value.

Vegetable Program Changes

For the 2000 crop year many changes occurred to the National Vegetable Estimation Program. Nine new commodities were added to the program, some States were added, some were dropped, and some States were discontinued for the seasonal forecasts but remained in the program on an annual basis. When comparing 2000 data to 1999 data comparable States should be used as noted in the table footnotes. If you need assistance, contact Biz Wallingsford at (202) 720-2157 or Debbie Flippin at (202) 720-3250.

Processing Production of 10 Selected Vegetables Estimated at 17.1 Million Tons

Processing production of 10 selected vegetables in 2000 totaled 17.1 million tons. Area harvested is estimated at 1.45 million acres. Processing crop value is estimated at 1.43 billion dollars. The three largest crops in terms of production are tomatoes, sweet corn, and snap beans, which combine to account for 87 percent of the 10 processing crops. The three most valuable of the 10 processed vegetables are tomatoes, sweet corn, and cucumbers, accounting for 74 percent of the total value when combined. California leads the nation with 22 percent of the harvested acreage, 62 percent of the production, and 47 percent of the value.

WEIGHTS and MEASURES

The following table on weights, measures, and conversion factors covers the vegetables in this report. It does not cover all containers for any one product.

The information has been assembled from State schedules of legal weights, various sources within the U.S. Department of Agriculture, and other Government agencies. For many vegetables, there is a considerable variation in weight per unit of volume due to differences in variety or size of commodity, condition and tightness of pack, degree to which the container is heaped, etc. Effort has been made to select the most representative and fairest average for each product. For those commodities which develop considerable shrinkage, the point of origin weight or weight at harvest has been used.

The approximate or average weights as given in this table do not necessarily have official standing as a basis for packing or as grounds for settling disputes. Not all of them are recognized as legal weight. The table was prepared chiefly for use of workers in the U.S. Department of Agriculture who have need of conversion factors in statistical computations.

Agricultural Outlook Forum 2001

February 22-23, 2001
Arlington, Virginia

USDA's 77th outlook conference will offer timely forecasts of farm prospects and insight on developments affecting the farm economy. The program will feature top business leaders and officials. Networking opportunities abound at this popular event, attended by over 1,300 people last February.

Policy Debate. Future farm policy will be a hot topic during 2001. The Forum will open with high-level panels on the next farm bill and world trade talks. Focus sessions during the two-day program will preview key policy issues on next year's agenda.

Farm Prospects. Attendees will hear leading analysts discuss the 2001 commodity outlook and industry trends, and receive USDA's latest 10-year projections.

Act Now. Get registration details and program updates at the Forum website. Can't attend in person? Sign up now to get speeches by e-mail after the Forum, or download them from the website.
