

USDA Egg Markets Overview

A weekly publication of the USDA AMS Livestock and Poultry Program, Livestock, Poultry, and Grain Market News Division

August 08, 2025

Negotiated wholesale prices for graded loose caged eggs are lower on light to moderate demand for moderate offerings. Supplies vary and trading is moderate. Wholesale prices for national trading of trucklot quantities of graded, loose, White Large shell eggs decreased \$0.46 to \$2.46 per dozen with a weak undertone. The wholesale price on the New York market for formula trading of Large cartoned shell eggs delivered to retailers declined \$0.73 to \$2.76 per dozen with a weak undertone. In the major Midwest production region, wholesale prices for Large, white, shell eggs delivered to warehouses decreased \$0.09 to \$3.50 per dozen with a weak undertone while the price to producers for Large cartoned shell eggs declined to \$3.32 per dozen. The California benchmark for Large shell eggs was down \$0.38 to \$4.38 per dozen with a weak undertone. Delivered prices on the California-compliant wholesale loose egg market decreased sharply, down \$1.46 to \$2.32 per dozen with a weak undertone. Demand is in a full range for moderate offerings and moderate to adequate supplies. Trading is slow to moderate.

Shell egg demand continues to struggle into early August. Consumers have yet to fully adjust to current retail price levels and, while grocers have been offering some relatively attractive price levels on ad, week-to-week consistency has been lacking, leading to an "in-and-out" buying pattern as shoppers hold off in hopes of a better deal the following week. The recent disruption to the supply of the most desirable heavy-weight eggs due to recent scheduled flock replacements and the sudden rise in wholesale prices, while now correcting, has injected a note of caution into the marketplace at all levels. However, an increase in feature activity this ad cycle may offer some support although the focus is on cage-free types at increased average ad price levels that may limit shopper interest. Besides, as we enter the dog days of summer, consumers have the final weeks of summer in their sights even as the start of new school year is fast approaching when their demand focus traditionally shifts back to eggs. Demand from egg products manufacturers is currently driving shell egg demand as weekly processing volumes are at near record highs, supported by continued imports of breaking stock and increased spot market availability.

Overall feature activity increases over the past week with a focus on cage-free and specialty shell eggs. Ads for conventional caged eggs are on par with last week's limited pace and the average ad price decreases \$0.09 to \$2.97 per dozen. Featuring of [UEP-certified](#) cage-free shell eggs dominates ad space this week and accounts for 41% of all shell egg ads this week and the average ad price increases \$0.46 to \$3.81 per dozen. Features for white-shelled nutritionally-enhanced shell eggs are the next most featured types this week with free-range organic a close third. A range of features on other brown-shelled non-organic and organic types fills out a fairly active week for shell egg promotions at retail.

The overall shell egg inventory increased just over 6.5% while the national inventory of Large class shell eggs was up nearly 9%. The inventory of Large shell eggs in the Midwest production region increased 4.5% as carton business continued to slow. The inventory share of Large class shell eggs rose nearly one percent to a 50% share of all shell egg

includes 12 and 18 packs combined; prices weighted by store count.

stocks on inventory at the start of the week. Stocks of cage-free eggs were down a half percent as eggs cleared to support ongoing retail promotions. Stocks of nutritionally-enhanced eggs swelled by 28% as product is staged to support active retail promotions into the current ad cycle. Stocks of organic shell eggs were down nearly 4% following good response from last week's ad campaigns. The inventory of breaking stock gained 2% as breakers slowed production and took advantage of increased spot market offerings to build inventory. Total estimated table egg production is up slightly from last week and was up 3% from last year to a year-to-year deficit the equivalent of 5.6 million cases in total.

The average national wholesale price for breaking stock was down \$0.37 to \$1.44 per dozen with a weak undertone. Demand is in a full range for light offerings and mixed supplies. Processing schedules are full-time to extended and trading is moderate. The volume of eggs processed last week increased 3% to the most active processing week since January 2022 and rose to a 36% share of weekly table egg production, up one percent for the week and the highest recorded share of weekly egg production. Cage-free stock accounted for nearly 39% of eggs processed last week, a one percent increase in share. Production of whole egg was down about 1.5% while production of egg components increased – whites by 11% and yolks by 7%. Dried egg production rose 12% and the production of inedible eggs increased 4%. Breaking yields without inedible declined slightly to 41.42 pounds per case broken.

Wholesale prices for certified liquid whole eggs are lower on a thin test. Demand is moderate to good but slowing for light offerings and light to moderate supplies. Trading is moderate. Wholesale prices for whole frozen eggs are too few to publish and last quoted at \$2.00 per pound with a weak undertone as are prices for frozen yolk last quoted at \$1.65 per pound. The undertone is weak with light demand and offerings. Supplies are light to moderate with trading is slow to moderate. Prices for dried whole eggs are also too few to publish and last quoted at \$17.00 per pound and those for dried yolk also last quoted at \$17.00 per pound. Dried albumen remains untested. The undertone is steady to weak with moderate to good demand for light offerings. Supplies are light to very light and trading is moderate to active.

According to NASS, the June monthly volume of frozen eggs in storage increased 7% from May but 48% below the prior year. Stocks of whole frozen egg increased 8%, 44% below last year and the share of whole egg stocks was unchanged at 44% of total frozen stocks. Stocks of frozen yolk increased 16% and were 40% below the level from last year. Frozen egg whites gained 8% to a level 55% below last year. Stocks of unclassified eggs rose 6% from last month and were down 51% from last year. The share of unclassified frozen stocks declined one percent to a 45% share of total frozen stocks.

As of July 1, 2025, the estimated U.S. non-organic commercial cage-free table egg flock increased 3% to 113.8 million, 39.5% of the current U.S. table egg flock. This represents a 13% increase over the number of non-organic, cage-free table egg layers on July 1, 2024, and a 6.4% increase in the share of the total commercial table egg flock. The USDA certified organic table egg layer flock on July 1 was up one percent from June at 6.9% of the total layer flock. The ratio of caged to cage-free layers currently stands at 53.5/46.5 as compared to 54/46 last month and 60.5/39.5 last year.

2025 Commercial Table Egg Flock HPAI Losses as of August 08, 2025

No new outbreaks of highly pathogenic avian influenza (HPAI) were reported over the past week in commercial table egg flocks. In 2025 to date, based on the latest data from APHIS, HPAI in commercial table egg layer flocks have resulted in the depopulation of 36.3 million birds. To date, USDA APHIS has confirmed 44 outbreaks in layer flocks in 10 states (AZ, CA, IA, IN, MO, NC, OH, PA, SD, and WA). The 36.3 million birds lost included 21.6 million (59.4%) in conventional caged systems and 14.8 million (40.6%) in cage-free systems. These losses represent 11.8% of the conventional caged layer flock and 14.6% of the non-organic cage-free flock on January 1, 2025.

Compared to January 1, the caged flock on July 1 was down 15.3% while the cage-free flock was up 12.7% and the organic table egg flock was down 1.6%.

Egg Markets Overview

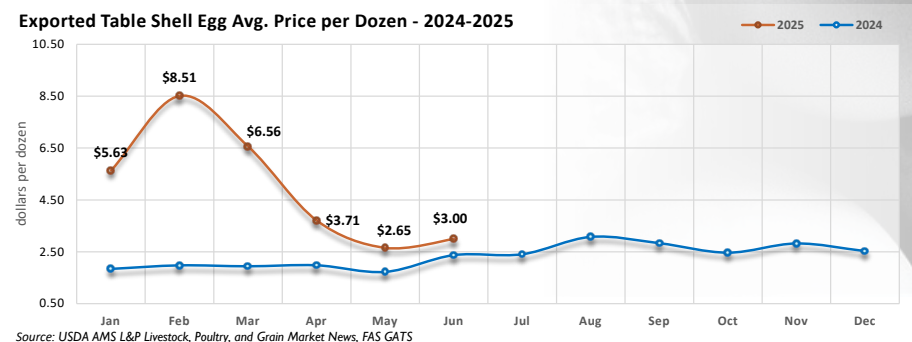

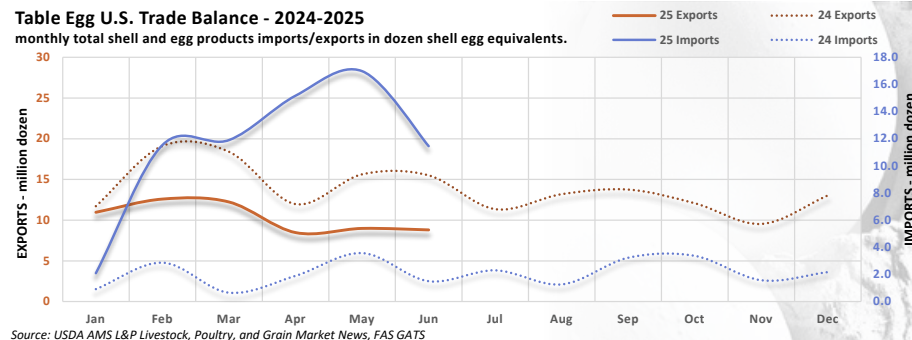

The overall export volume of shell egg and egg products in June decreased 2 percent; 43 percent below the year ago level but the overall value for the month was up 14 percent, one percent over last year. The export volume of table shell eggs decreased 24 percent from last month, 20 percent under last year as producers held back production for the domestic market. The overall value of table egg exports decreased 15 percent for the month but the average price per dozen exported was up 13 percent (from \$2.65 to \$3.00 per dozen). Canada remains the primary U.S. export market for table shell eggs with 80 percent of the monthly and 84 percent of the annual shipments to date. The Bahamas remains a distant second with 5 percent of exports. The U.S. exported table shell eggs to 19 trade partners in June - 25 for the year to date - with the top 5 accounting for 97 percent.

The volume of all egg products exported in June increased 38 percent; 56 percent below year ago levels, while the total value of all egg product exports was up 87 percent. Exports of liquid egg products increased 215 percent for the month with a 226 percent increase in value. The volume of exported liquid whole egg saw the smallest month-to-month increase - up 2 percent with various countries posting monthly increases and decreases that largely keep overall volume about unchanged. The export volume of liquid yolk rose 66 percent for the month with Mexico once again a key contributor but this month joined by Japan that together accounted for 96 percent of all monthly trade. Exports of liquid albumen were up sharply on a significant volume from Ireland that accounted for 81 percent of all volume.

Exports of dried egg products in June were down 15 percent and 78 percent from last year. However, the total value rose 7 percent. Exports of whole dried egg were the only type to post a month decrease, down 35 percent, primarily as Thailand was out of the market this month. Exports of dried yolk increased 6 percent with the return of Mexico and South Korea to the marketplace. Dried albumen exports rose 400 percent and all to Canada.

Overall imports of shell and egg products declined 33 percent in June and the overall value declined 22 percent as early-year prices moderated. Imports of shell eggs drove the decline, down 25 percent in volume and 29 percent in value as domestic breaking stock prices declined to a level making importing from some sources less desirable. Pakistan, Azerbaijan, and India joined the community of nations shipping shell eggs to the U.S. Imports of liquid egg products rose 24 percent with nearly all trade partners increasing shipments. Imports of liquid yolk rose 973 percent on a significant volume from Taiwan and imports of liquid albumen posted a 94 percent gain - all from Canada.

Imports of dried egg products decreased 76 percent from the prior month with volumes of all types down sharply. Imports of whole dried egg were down 68 percent as shipments from Lithuania slowed. No imports of dried yolk were recorded in June while imports of dried albumen declined 80 percent, again, as Lithuania sharply reduced shipments.
