## Ready-to-Cook Weight Up 1 Percent from Last Year

**October 2024** contained 23 weekdays (including 1 holiday) and 4 Saturdays.

**October 2025** contained 23 weekdays (including 1 holiday) and 4 Saturdays.

**Poultry certified wholesome** during October 2025 (ready-to-cook weight) totaled 4.97 billion pounds, up 1 percent from the amount certified in October 2024.

**The preliminary total live weight** of all federally inspected poultry during October 2025 was 6.53 billion pounds, up 1 percent from 6.48 billion pounds a year ago. Young chickens inspected totaled 5.84 billion pounds, up 1 percent from October 2024. Mature chickens, at 66.8 million pounds, were down 11 percent from the previous year. Turkey inspections totaled 602 million pounds, down 3 percent from a year ago. Ducks totaled 15.1 million pounds, down 6 percent from last year.

**Young chickens slaughtered** during October 2025 averaged 6.72 pounds per bird, up slightly from October 2024. The average live weight of mature chickens was 7.04 pounds per bird, down 2 percent from a year ago. Turkeys slaughtered during October 2025 averaged 31.0 pounds per bird, down 2 percent from October 2024.

**Ante-mortem condemnations** during October 2025 totaled 13.4 million pounds. Condemnations were 0.21 percent of the live weight inspected, as compared with 0.19 percent a year earlier. Post-mortem condemnations, at 26.8 million pounds, were 0.54 percent of quantities inspected, as compared with 0.58 percent a year earlier.

## Terms and Definitions Used for Poultry Slaughter Estimates

**Ante-Mortem Condemnations:** Birds federally condemned prior to entry into the slaughter plant which includes Dead-On-Arrival (DOA) and condemned for other causes.

**Average Live Weight:** The weight of the whole bird, before slaughter. Excludes post-mortem condemnations.

**Certified Ready-to-Cook:** The weight of poultry certified wholesome by inspection after post-mortem condemnation pounds are removed. Ready-to-cook represents poultry meat ready for the marketing channel.

**Dressing Percent:** Usually expressed as a percentage yield of frozen and chilled carcass in relation to the weight of the live bird.

**Ducks:** Includes all ducks regardless of age and weight.

**Federally Inspected (FI) Plants:** Plants that transport meat interstate must employ federal inspectors to assure compliance with USDA standards.

**Mature Chickens:** Fowl from breeder and market egg flocks and stags and cocks.

**Number of Head:** Includes post-mortem condemnations.

**Old Turkeys:** Fully matured birds held for egg production, usually over 15 months of age.

**Plant, Slaughter:** An establishment where birds are killed and butchered.

**Post-Mortem Condemnations:** Carcasses or parts of birds condemned includes federally inspected and establishment sorted because of disease or mishandling and removed from the slaughter line and destroyed.

**Slaughter:** Killing and butchering of birds primarily for food.

**Total Live Weight:** The total weight of live birds, before slaughter. Excludes post-mortem condemnations.

**Young Chickens:** Commercially grown broilers-fryers and other young immature birds such as roasters and capons.

**Young Turkeys:** Young birds grown to a matured market age, and other turkeys such as fryers/roasters and young breeders.

Statistical Methodology

**Data Sources:** Data for poultry slaughter estimates are collected by inspectors of the Food Safety and Inspection Service (FSIS), USDA for all Federally Inspected plants. Over 99 percent of the total United States slaughter for any species is under Federal Inspection. The number of head slaughtered daily, by species and class, as well as condemnations and total live and dressed weights are obtained by shift for each plant. Approximately 361 plants slaughtered poultry in the United States under Federal Inspection in 2024. Young chickens were slaughtered in 38 States, young turkeys in 30 States.

**Revision Policy:** Data for the previous month and year-to-date totals are subject to revision the following month after the initial monthly estimates are published. Final data are published in the annual summary released in February and include any revisions made to current and previous year’s published data. Revisions are generally the result of late reports or corrections received by FSIS from plants and are usually less than one-half of one percent. No revisions will be made to the previous year’s data after publication of the annual summary in February.

**Procedures and Reliability:** Plant inspectors submit data electronically for each shift a plant operates. An edit provides checks for the detection of errors such as invalid plant information, duplication, and erroneous data. Data are accumulated to monthly totals for this release.

Data for major slaughter plants with missing reports are adjusted prior to publication to assure that all plants slaughtering a significant portion of a specific class are included. Estimates for missing shifts are made only after verifying that the plant was in operation. Adjustments are based on a shift determined to be similar to the one missing. Late reports replace imputed data as they become available. While there is a varying degree of incompleteness from month to month, it has only a minimal impact on the published totals.

Poultry slaughter estimates are based on a census of operating plants and, therefore, have no sampling error. However, they may be subject to errors such as omissions, duplications, and mistakes in reporting, recording, and processing the data. These errors are minimized through strict quality controls in the edit and summarization process, and a careful review of all reported data for consistency and reasonableness.
