Statistical Methodology

Survey Procedures: The peanut stocks and processing estimates in this report are based on a survey conducted during the first three weeks of the month. The survey is required by law under Title 7 of the United States Code (7 U.S.C. 951, 2010). Peanut stocks are a census of all known cleaners, shellers, crushers, warehouses, cold storage plants, and processors of peanuts who handle more than 30,000 pounds annually. Every effort is made to obtain a report from all facilities.

Estimating Procedures: Since a complete report is not always received from all facilities, estimates are made for missing facilities to assure complete coverage. Peanut stocks survey data are reviewed at the national level for reasonableness and consistency with historical estimates.

Revision Policy: Peanut stocks are subject to revision at any time during the marketing year. Revisions can be made when late reports are received and errors are detected in reporting and calculating. Once the marketing year ends, no revisions can be made to the previous marketing year.

Reliability: The peanut stocks and processing survey is subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. These errors cannot be measured directly, but are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.
