COMMERCIAL HATCHERY PRODUCTION

By States and Geographic Divisions, 1950 - 1959-- Revised Estimates

This bulletin contains the official estimates of the United States Department of Agriculture relating to chicks hatched by commercial hatcheries for 1950-59. Estimates of chicks hatched by commercial hatcheries 1930-49 were published in 1953.

Commercial hatcheries produce practically all of the chickens raised. Many hatcheries operate at near capacity throughout the year. This is particularly so with hatcheries that produce chicks for the production of commercial broilers. The production of commercial broilers has become the most important segment of the hatchery industry. Its growth has been rapid since 1950 in many States. In 1959, 1,730,541,000 commercial broilers were produced, compared with 631,458,000 in 1950. Because of the importance of the output of broiler chicks, the Department began in 1955 to make separate estimates of the production of chicks hatched for broilers and the number of chicks hatched for egg production. These estimates since 1955 are shown in this bulletin.

The number of hatcheries hatching chicks has been declining. However, total egg capacity has been relatively stable. The number of hatcheries operating at the beginning of 1959 totaled 4,257 -- 38 percent less than the number operating at the beginning of 1953. Egg capacity of hatcheries January 1, 1959 totaled 530,057,000, compared with 562,237,000 in 1953 -- a decrease of 6 percent.

Hatchery production estimates are based on data supplied voluntarily by cooperating hatchery men in connection with comprehensive surveys of the industry. At the end of the year, State statisticians make an extensive canvass of the industry in their respective States to check on total capacity of hatcheries. Through direct contacts with hatcheries, the State Poultry Extension at the State Colleges, the officers of the American Poultry and Hatchery Associations, and Poultry Improvement Associations, statisticians have been able to account for the capacity operating in their respective States at that time. Monthly and annual reports on chicks hatched are received from hatcheries that have approximately 80 percent of the total incubator capacity in the United States.
