CHICKEN AND EGG PRODUCTION IN 1933

More chickens were raised on farms last year than in 1932, but proportionally more of them were sold and consumed in 1933 so that the number of chickens remaining in farm flocks on January 1 of this year was smaller than the number at the beginning of 1933.

Although more chickens were raised and disposed of in 1933 than in either of the preceding 2 years, total values were considerably less owing to the record low price level last year.

The increased prices for feed during 1933 without corresponding increases in prices of poultry products, were mainly responsible for the heavy marketings of poultry with corresponding decrease in numbers on hand at the end of the year. This situation was doubtless largely responsible also for the decrease in production of eggs in 1933 below that of 1932, and to much below the heavy production of 1931.

Because of the extremely low prices, the total value of the eggs in 1933 showed a decrease compared to that of the years 1932 and 1931, still greater than the decrease in production.

The great changes during the past 3 years, and their relation to the favorable years, 1926 - 1930, are shown in detail by the comparisons, and tables that follow.

The estimated number of chickens on farms in the United States this year on January 1 was 454,629,000, which was about $1\frac{1}{2}$ percent less than in 1933 and about .8 of one percent greater than in 1932, when numbers were about equal to the average of the years 1926-1930.

The total farm value per head of chickens on farms January 1 is estimated at 42.2 cents in 1934, 45.1 cents in 1933, 61.7 cents in 1932 and 89.8 cents for the 5-year average, (1927-1931, on January 1).

The number of chickens raised on farms in 1933 is estimated at 662,550,000, which is 1.1 percent more than in 1932, 5.3 percent more than in 1931 and 1.3 percent more than the average number raised in the years 1926-1930.

The number of chickens sold from farms in 1933 is estimated at 387,784,000 being 4.3 percent more than in 1932, 3.0 percent more than in 1931 and 5.5 percent more than the average for the 5 years, 1926-1930.

The number of chickens consumed on farms in 1933 is estimated at 226,386,000 or 3.3 percent more than in 1932, 9.4 percent more than in 1931 and 0.9 percent more than the 5-year average farm consumption.

The estimated value of chickens sold in 1933 averaged 35.0 cents per head, compared with 42.4 cents in 1932, 57.7 cents in 1931 and an average value of 75.7 cents per head in the 5 years 1926-1930.

The total value of chickens sold and consumed on farms in 1933 was \$135,705,000 and \$71,313,000 respectively compared with \$157,727,000 and \$83,051,000 in 1932, \$217,132,000 and \$108,662,000 in 1931 and with an average of \$77,836,000 and \$5,334,000 for the 5 years 1926-1930.

The number of eggs produced on farms in 1933 is estimated at 31,813 million eggs or 2,651 million dozen, and is 1.5 percent less than in 1932, 7.6 percent less than in 1931 and 0.7 percent less than the average production of the years 1926-1930.

It is estimated that 22,004 million eggs or 1,834 million dozen were sold from farms in 1933 and that 8,484 million eggs or 707 million dozen were eaten on farms, this being about 2 percent less sold and 0.8 percent less eaten than in 1932, and 10.3 percent less sold and 2 percent less eaten than in 1931. Farm sales of eggs in 1933 were 4.3 percent less, and farm consumption 9.4 percent more than the average for the years 1926-1930.

The farm value of eggs sold averaged 13.8 cents per dozen in 1933, compared with 14.2 cents in 1932, with 17.5 cents in 1931 and with an average of 27.0 cents for the 5 years 1926-1930.

The total estimated value of eggs sold in 1933 was \$253,373,000 compared with \$265,198,000 in 1932; \$357,872,000 in 1931 and \$517,463,000 for the 5 year average. Eggs consumed show a value of \$91,430,000 in 1933; of \$93,787,000 in 1932; of \$120,509,000 in 1931 and a 5 year average of \$170,026,000.
