FARM PRODUCTION AND INCOME, CHICKENS AND EGGS, 1941-42*

Chicken production on farms in 1942 totaled 702,666,000 birds -- the largest number since 1930. The total was 10 percent above production in 1941 and 15 percent above the 10-year (1931-40) average.

In addition 204,060,000 "commercial broilers" were produced, with an average live weight of 2.96 pounds. Production of commercial broilers has doubled since 1939.

Chicken Prices Up 20 Percent: The average price per pound live weight of chickens sold from farms in 1942 was 18.9 cents, compared with 15.8 cents in 1941 and 13.7 cents, the 10-year average. Chicken prices usually increase during the first 4 months of the year and then gradually decline during the remainder of the year. In 1942 the low prices of the year were in January; they gradually increased throughout the year from 17.0 cents per pound in mid-January to 20.5 cents in mid-December.

Farm Sales Up 15 Percent: About 438,241,000 chickens were sold from farms in 1942, an increase of 15 percent above sales in 1941 and 14 percent above the 10-year average. Cash income from these sales was \$346,494,000 -- 41 percent above the 1941 cash income.

Consumption of Chickens on Farms Down 1 Percent: The consumption of chickens in the households of farm producers was 199,228,000 birds in 1942 -- 1 percent fewer than in 1941 and 12 percent below the 10-year average. The North Central States accounted for 38 percent of all chickens consumed by farm producers in the United States during 1942; the South Central States, 32 percent; and the South Atlantic States 18 percent; the Western States, 7 percent and the North Atlantic States, 5 percent. Producers in the United States consumed 28 percent of all the chickens they produced in 1942. Producers in the South Atlantic and South Central States consumed the largest percentage of their production, 48 and 42 percent respectively, while the North Atlantic States consumed the smallest percentage of their production or 12 percent.

Gross income, which is the income from sales plus the value of chickens consumed in households of farm producers, was \$479,071,000 in 1942 -- 35 percent above the 1941 gross income.

Inventories Reach Peak Level: The number of chickens on farms January 1, 1943 was 540,107,000 birds, not including commercial broilers. This is a record high number -- 14 percent up from a year ago and from the former peak number in 1928, and 29 percent above the 10-year (1932-41) average. High egg prices, which were also generally high compared with feed prices, encouraged larger flocks for the production of eggs, especially in the West North Central and South Central States, where the demand for eggs for drying has been very good at relatively high prices. Chicken numbers increased from a year ago in every State in the country except one, which showed no change.

* Prepared by S. A. Jones, Senior Agricultural Statistician; E. Smith Kinball, Agricultural Statistician; Paul W. Smith, Associate Agricultural Statistician; and Robert F. Moore, Associate Agricultural Statistician.

Largest Egg Production: About 48 billion eggs were produced on farms in 1942 -- 15 percent more than in 1941 and the largest production of all time. Production per layer was 113 eggs per hen and pullet on hand at the beginning of the year, compared with 110 eggs in 1941. Total egg production was above that of 1941 in all parts of the country. The same was true of the rate of lay except in the Western States where the rate (126 eggs) was the same as in 1941.

The rate of lay is computed by two methods; the first, often referred to as the "hen-house rate", is the number of eggs produced during the year, divided by the number of hens and pullets on hand January 1; the second method is the number of eggs produced during the year divided by the average number of layers on hand during the year. The rate per average layer on hand during the year is about 1/4 higher than the hen-house rate.

Sales of Eggs Up 6.6 Billions: About 40 billion eggs were sold from farms in 1942 compared with 33½ billion in 1941 and 28 billion, the 10-year average. Of the total sales in 1942 the West North Central States accounted for 30 percent, the East North Central 22 percent, the North Atlantic 16 percent, the South Central 15 percent, the West 10 percent the South Atlantic 7 percent. Cash income from sales of eggs in 1942 was \$1,000,960,000 -- 52 percent above that of 1941. This is the only year the income from eggs has reached a billion dollars.

Fewer Eggs Used in Farm Households: Eggs consumed in households of farm producers were 7,629 million in 1942 -- 2 percent less than in 1941. With higher egg prices producers eat fewer eggs, even though total egg production is larger. The value of eggs consumed on producer's farms in 1942 was \$183,627,000 -- 25 percent more than in 1941.

Gross income from eggs in 1942 was \$1,184,587,000 -- 47 percent above the gross income in 1941. The combined gross farm income from chickens and eggs in 1942 was \$1,663,658,000 compared with \$1,160,104,000 in 1941, an increase of 43 percent.

Big Increase in Commercial Broiler Production: The term "commercial broiler" as used in this publication includes all young chickens of the heavy breeds, 2 to 4 pounds live weight raised for meat, and from which pullets are sold for broilers as well as cockerels. Commercial broiler production is not included in farm production estimates.

In 1942 about 204,060,000 commercial broilers were produced -- 18 percent increase from 1941. Commercial broiler production has doubled since 1939. The price per pound sold was 22.8 cents compared with 18.4 cents in 1941 and 17.3 cents in 1940. The gross income from commercial broilers in 1942 was \$138,002,000 compared with \$93,102,000 in 1941.

Per Capita Consumption: Per capita consumption of chickens in 1942 was 21.9 pounds dressed weight compared with 19.5 pounds in 1941 and 18.0 pounds the 5-year (1938-40) average. Per capita consumption of eggs in 1942 was also higher than in 1941 -- 320 eggs compared with 314 in 1941 and 305, the 10-year average. To supplement the supply of red meat, which was insufficient to meet civilian demand, consumers purchased more chickens per capita than ever before and more eggs per capita than in any year since 1931.
