## Direct Hay Weighted Average Report for week ending 5/30/2025

Compared to the last report: Hay prices are mostly steady across all regions with moderate to light demand. According to the US Drought Monitor, heavy rainfall (2 inches or more) prompted a 1-category improvement to ongoing drought areas of south-central and southeastern Texas. Despite this recent heavy rainfall, levels in the long-term monitoring wells of Bexar and Medina Counties remain at all-time lows. In addition, many of the 28-day average USGS streamflows are below the 5th percentile, supporting the D3-D4 depiction. Since the SPIs dating back 6 months are neutral and considering the major impact is hydrological, the drought impact was changed to long-term only. With drought improvement for northwestern Oklahoma this past week, nearly all of Oklahoma and northern to eastern Texas are drought-free.
