Statistical Methodology

Data Sources: Data for the *Egg Products* report are obtained from the Public Health Information System (PHIS – a web-based system), specifically, from the Monthly Volume Reporting task questionnaire which is completed by inspectors of FSIS, USDA. FSIS is responsible for administering a mandatory inspection program for egg products under the authority of the Egg Products Inspection Act of 1970. The act and its associated regulations require that all commercial egg breaking and processing plants operate under USDA supervision. Reports are currently received from approximately 80 plants in the United States. Plant management provides monthly volume data to the resident USDA inspector at the applicable plant who then manually enters in PHIS.

Revision Policy: Revisions are generally the result of late reports received by FSIS from plants. Revisions for the previous month and year-to-date totals are published in each monthly release. Additional revisions are published annually in the February report.

Procedures and Reliability: FSIS reviews plant data for accuracy and completeness and provides NASS a data file. NASS reviews the data for unusual values. The egg products estimates are based on a census of all commercial egg breaking and processing plants; therefore, there are no statistical estimation and sampling errors.
