## Current National Drought Summary (May 6, 2025)

A blocking weather pattern that is common during the spring, resulted in a couple of slow-moving low pressure systems from the end of April through the start of May. These low pressure systems brought heavy precipitation (more than 2 inches) and drought improvement to the Northeast, Mid-Atlantic, and Southern Great Plains. The heavy precipitation across Oklahoma, western Texas, and eastern New Mexico was accompanied by cooler-than-normal temperatures. Farther to the north, drought expanded and intensified across portions of the Central to Northern Great Plains. Another area that experienced worsening drought was the Florida Peninsula. For the West, drought improvements were made to parts of Arizona, Utah, and western Montana. No changes were made this week to Hawaii, while Alaska and Puerto Rico remain drought-free.
