Statistical Methodology

Crop value calculations: *Crop Values* includes average prices and values of production for major field crops and many specialty crops. All prices in this report are marketing year average (MYA) prices which do not include allowances or adjustments for commodities under government loan at the end of the marketing year, commodities forfeited to the Commodity Credit Corporation, loan deficiency payments, farm program payments, or disaster payments.

Each State MYA price is based on sales in the months comprising its marketing year, while United States MYA prices are based on sales during the standard United States marketing year for each crop. See pages 46 and 47 of this report for a listing of State and United States marketing year definitions for specified field crops.

United States monthly prices for all crops in the monthly price estimating program are computed by weighting monthly State prices by monthly marketings for each State. For the major field crops, the States included in the monthly price estimating program are shown on pages 6 and 7. United States MYA prices for corn, sorghum, oats, barley, wheat, rice, soybeans, peanuts, flaxseed, sunflower, canola, Upland cotton, and hay are computed by weighting United States monthly prices by monthly marketings for the United States marketing year. For all other crops, United States MYA prices are computed by weighting State MYA prices by the estimated production in each State.

State and United States preliminary 2019 MYA prices for corn, sorghum, oats, barley, wheat, rice, soybeans, flaxseed, sunflower, canola, Upland cotton, dry edible beans, chickpeas (garbanzo beans), dry edible peas, lentils, peanuts, and potatoes are based on entire month price data through December 2019 and, except for cotton and peanuts, allowances are made for the portion of the 2019 crop to be marketed during the remainder of each crop's 2019 marketing year. State MYA prices for crops not in the monthly price program are based on annual surveys. See the schedule on page 46 for the publication dates of final MYA prices for specified crops.

State value of production is computed by multiplying each State price by its production. Value of production for the United States is the sum of State values for all States listed for the crop. Value of production estimates in this report relate to the crop year. These estimates should not be confused with cash receipts which relate to sales during a calendar year irrespective of the year of production.

Revision policy: Estimates contained in this report may be revised the following year if new information is available that would justify a change. Estimates will also be reviewed after data for the 5-year Census of Agriculture are available. No revisions will be made after that date.
