Cotton: World Markets and Trade

Abundant Chinese Stocks Mask Global Picture

Despite record high global stocks, those held outside of China are projected at a 4-year low. Major exporters hold more than half of those stocks. In fact, U.S. stocks are forecast to fall to their lowest level since 1990/91. Driving this paradox is China's support policy. Until recently, it was based on building stocks, which moved excess global supply off the market (and into the State Reserve), effectively supporting world prices.

However, new policies to limit import opportunities and encourage Reserve Sales may halt the further accumulation of stocks by China next season. With world production expected to exceed consumption for the fifth consecutive year, efforts by China to dispose of State Reserve stocks are likely to cause world prices to fall.

Overview

Global cotton production is virtually unchanged. Ending stocks are lowered slightly on higher consumption. U.S. production and ending stocks are down, while exports and consumption are unchanged. The season average farm price is raised.

Prices

The U.S. spot price and the A-Index showed little movement as the markets await more information about changes to China's reserve policy.
