Cotton: World Markets and Trade

Low U.S. Stocks and Falling Production Limit Export Potential in 2011/12

The U.S. exportable supply in 2011/12 is currently expected to be 10 percent below last season. Beginning stocks are the lowest in 15 years and production is forecast down. Adverse weather, particularly in Texas, is expected to significantly increase abandonment and reduce yields.

With record sales on the books at the beginning of the season, continuing uncertainty about the size and quality of the U.S. crop will limit prospects for significant additional sales until production volume and quality are fully known. Meanwhile, falling prices have led to sales cancellations and difficulties in completing existing contracts.

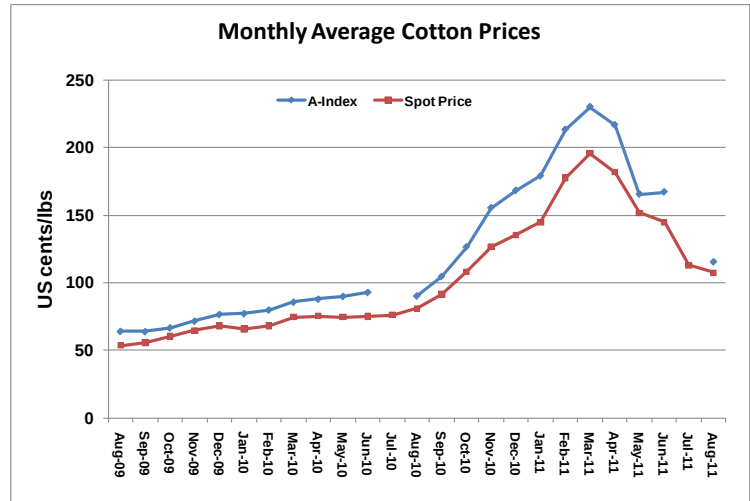

Record crops in Australia and Brazil will provide substantial export competition for the United States, especially over the next few months. In light of these factors, U.S. exports are forecast to drop to 12.3 million bales.

Overview

Global trade is down with supply nearly unchanged and ending stocks higher. U.S. production is increased 554,000 bales to 16.5 million and exports are increased 300,000 bales. The season average price is lowered, but remains at a record high level.

Prices

The U.S. spot price continued to fall dramatically in recent weeks, reaching \$1.07 per pound, 30 percent below the recent record. The A-Index has dropped sharply and is now only about 10 cents above the U.S. spot price.
