Cotton: World Markets and Trade

2004/05 World Production Outpaces Demand

World production in 2004/05 is forecast at record 102.5 million bales, up 9.6 percent. Area is projected to respond to higher prices seen this year and in some major producing countries production is expected to recover from weather effects experienced last season. World consumption is forecast up 1.2 percent at a record 99.0 million bales as improving global economic conditions are expected to boost demand. World production is expected to exceed consumption for only the second time in the last six years. World ending stocks are forecast to increase 3.8 million bales to 36.5 million bales, with a stock to use ratio of 36.8 percent, up 3.4 percentage points from the current year, but still lower than any other year since 1994/95. World trade is expected to decrease by nearly 8 percent, with imports at 30.8 and exports at 30.5 million bales. The United States is forecast to capture 37.7 percent of world exports down from the record 41.8-percent share expected this year.

U.S. production for the 2004 crop is forecast at 17.6 million bales down 3.6 percent from the previous crop and in line with the average for the prior 10-year period. The production forecast is based on NASS reported planting intentions and historical abandonment rates and yields. Consumption for 2004/05 in the U.S. is forecast to decline by 7.9 percent to 5.8 million bales, as continued downward pressure is put on the U.S. spinning industry as the remaining textile and apparel quotas are phased out. U.S. exports are forecast at 11.5 million bales, down from the record 13.8 million in 2003/04. While higher production in net exporting countries will increase competition, production increases in net importing countries will lower import demand. U.S. ending stocks are forecast at 3.9 million bales, up 300,000 bales. The U.S. stock-to-use ratio is expected to increase from 17.9 to 22.5 percent.

U.S. COTTON OUTLOOK

No significant changes compared to April's forecasts.

WORLD COTTON OUTLOOK

Based on new import data for India, MY 2001/02 world import numbers were increased by 441,000 and world stocks by 406,000 bales. The new data also led to lower world import and higher stock numbers for MY 2002/03.

For 2003/04, favorable conditions in India and Brazil led to a 712,000 bale increase in the May world production forecast. At the same time, world use is proving slightly lower than previously expected. Although use in 2003/04 is still expected to significantly outstrip production, the May world stock estimate is 1,047,000 bales higher than April.

The prospect for world trade in 2003/04 has deteriorated more than for use. The 2003/04 world import estimate is down 278,000 bales in May as compared to April.

Since the April report, the major country by country developments for the 2003/04 crop year are as follows:

Brazil: Favorable weather is continuing to improve prospects for the Brazilian crop and the production estimate has been raised 250,000 bales. The export forecast, however, has been lowered 300,000 bales due to the later harvesting period for the Mato Grosso area. A combination of higher production and lower export has caused the ending stocks forecast to be increased 625,000 bales.

India: The Indian harvest has proven significantly better than originally expected, up 500,000 bales over the April estimate. However domestic consumption has picked up only slightly such that nearly all the increase will go into stocks. Factoring in a 2002/03 increase in ending stocks, the May forecast for ending stocks is 704,000 bales higher than in April.

China: Trade data have prompted a 200,000-bale increase in both imports and ending stocks.

Mexico: The consumption forecast has been lowered 100,000 bales and the import forecast lowered 125,000 bales.

Pakistan: Trade data suggest that 2003/04 imports should be 150,000 bales lower than was predicted in April. However mill use continues relatively strong. Millers are

apparently willing to let stocks drop in anticipation of a more favorable market, and the forecast ending stocks have been dropped by the full 150,000 bales.

COTTON PRICES

The A-Index, a principal measure of international cotton prices, is an average of the five lowest quotes of major cotton growths for delivery to Northern European ports. In April, the index averaged 69.37 cents per pound, down 3.08 cents from March's average. In New York, the nearby July future contract settlement price decreased 2.60 cents between the end of March and the end of April, closing at 59.50 cents per pound on April 30.

Cotton Consumption and Stocks

	March	February
Seasonally adjusted daily rate of consumption	23,595 bales	23,811 bales
Total bales consumed per month	635,056 bales	492,950 bales
Seasonally adjusted annualized consumption rate	6.16 million bales	6.22 million bales
Active spindles	2.22 million	2.23 million
% Spindles dedicated to 100% cotton	55.5 percent	55.3 percent
Cotton's share of total fibers consumed on spindle system	80.32 percent	80.86 percent
Cotton Stocks at mills	353,438 bales	335,279 bales
Cotton Stocks in public storage	9.3 million bales	11.7 million bales

U.S. Highlights

Textile Mill Report. Mill buyers purchased a light volume of 2003-crop cotton for prompt through August 2004 delivery. Reports indicated that most mills have covered most of their expected raw cotton needs through September 2004. Mill inquiries were steady for 2004-crop cotton. Most mills operated on a five to six day production schedule.

U.S. COTTON EXPORTS totaled \$480 million or 1.4 million bales in February, up from \$382 million or 1.11 million bales in January according to Census data. China was the top destination for U.S. cotton in February at 707,186 bales or \$246.8 million, followed by Turkey at 134,140 bales or \$44.9 million.

U.S. COTTON IMPORTS decreased to \$944,000 (1,891 bales) in February from \$2 million (4,004 bales) in January. Egypt accounted for \$711,000 (1,426 bales), Australia accounted for \$233,000 (465 bales) in January.

* Loss for countries outside the United States reflects cotton lost or destroyed while in the marketing channel. For the United States, loss reflects the difference between stocks as reported by the Bureau of the Census and implicit stocks based on supply plus total use. A negative "loss" is a positive number.

1. The A-Index is the average of the five lowest quotes of the following descriptions (all 1-3/32"): Memphis Terr.; Calif. Ariz; Mexico; Central America; Paraguayan; Turkish; Uzbeki; Pakistani 1503; Indian H-4; Chinese Type 329; West African; Tanzanian; Greek; Syrian; and Australian.

2. Reflects incorporation of forward shipment quotations but does not include the Secretary's discretionary adjustments.

Averages for August 1998 and forward reflect 1998/99 quotations; others are 1997/98 quotations
