PERCENTAGE OCCUPANCY OF PUBLIC COLD-STORAGE WAREHOUSES

COLD STORAGE REPORT

Analysis of holdings and space April 30, 1955

Data for this report are collected from public, private, and semiprivate warehouses, apple houses, and meat-packing plants where food products are generally stored for 30 days or more. Commodities in space owned or leased and operated by the armed services are not reported. All April 30 figures are preliminary.⁷

Commodity summary

For the second consecutive month, creamery butter stocks decreased contraseasonally. April 30 stocks of creamery butter were down to 293 million pounds as compared with 311 million a month earlier, according to warehouse reports received by the Agricultural Marketing Service. The 1950-54 average change during April is an increase of 13 million pounds. In April 1954, butter stocks increased 29 million pounds to total 376 million by the end of the month. A net gain in storage stocks of shell eggs amounting to 698,000 cases brought the total to almost 1.2 million cases by April 30. For April last year, a net increase of 286,000 cases raised national stocks to 728,000 cases. American cheese holdings totaled 466 million pounds on April 30, a net gain of about 3 million pounds from the month before. Current stocks compare with 461 million a year earlier and 226 million pounds, the 5-year average for April 30. The April seasonal decline brought fresh apple stocks down to 4 million bushels; last April slightly more than 3 million bushels were in storage. Frozen fruit stocks fell off by 46 million--the average decline is 38--to total 222 million pounds on April 30. Seasonal net reductions also lowered national holdings of frozen vegetables to 422 million pounds. By comparison, this time last year, over 469 million pounds were in storage. Holdings of poultry at 128 million pounds were down about one-third from last April and about one-fourth less than average. April 30 red meat stocks at 823 million pounds also were under average but were 17 percent larger than those of April. Orange concentrate stocks were increased by 6 million gallons during April to reach 32 million by the end of the month. This increase was equal to the April 1954 change at which time national stocks totaled 31 million gallons.

Storage occupancy

By April 30, cooler occupancy gained one point over the previous month's level. The 59 percent compares with 58 on March 31 and 61 percent this time last year. The average for April 30 is 58 percent. In some sections, however, cooler occupancy continued to decline. This was so in the Middle Atlantic, East North Central, and Pacific regions. All areas except the South Atlantic indicated a falling off of freezer occupancy. Utilization by April 30 was down to 66 percent as compared with 68 the previous month. Last April, freezer occupancy was as high as 72 percent while the 5-year April 30 average is 71 percent.

General commodity movement

Cooler product weights were down 11 percent since March 31. On that date, 1.6 billion pounds were on hand as compared with 1.4 billion on April 30. For such products as dried and evaporated fruits and nuts, cheese, other dairy products, shell and dried eggs, plus selected meat items, stocks were increased during April, but the net withdrawals of fresh fruits and vegetables, beef and pork exceeded the net storage gains. In freezer space, too, product weights decreased. Here, however, the decrease was quite small as net gains in stocks of cream, eggs, juices, and some meats almost equaled the decreases reported in stocks of butter, poultry, fruits, vegetables, and meats.

Fruits, vegetables and juices

The April seasonal decline in frozen fruit stocks was 46 million pounds as compared with 43 million a year earlier; 38 million is the 5-year average decrease during April. Current stocks, at 222 million pounds, were about 6 percent above those reported last April, and 22 percent above average. During April, stocks of all

fruit items fell off. Notably among these were 18 million pounds of strawberries, leaving 41 million in storage as compared with 52 million last April; 7 million pounds of cherries which left 29 million whereas a year earlier stocks totaled approximately 30 million. Fresh fruit stocks of apples and pears also declined seasonally. April 30 holdings of apples were down to 4 million bushels or about average for this time of year. Pear holdings totaled 122,000 bushels which compares with the April 30 average of 104,000. Frozen vegetable stocks were down seasonally but not by as much as last April. At that time, the net disappearance was 43 million pounds as compared with 35 million this year. Total frozen vegetable holdings, at 422 million pounds, were about 10 percent under the record April 30 stocks reported last year. Yet, April 30, 1955, stocks for the following vegetable items were at record levels for this date: lima beans, 65 million; snap beans, 43 million; brussels sprouts, 21 million; and corn, 55 million. However, stocks of all vegetable items were smaller on April 30 than the month before except for spinach. The latter increased 19 million pounds to 37 million. Frozen peas totaled 47 million pounds, a net reduction of 16 million pounds since March 31. Current stocks were the second lowest since 1946. Orange concentrate stocks gained about 6 million gallons since March 31. The 32 million gallons in storage compares with 18 million, the April 30 average, and 31 million reported last April.

Poultry and dairy products

Storage holdings of frozen poultry were reduced by 34 million pounds during April to 128 million pounds by the end of the month. These stocks were the second lowest for this date since 1945. Last April, poultry stocks (185 million) were the second largest for the date since 1947. Notably among the reduction in poultry stocks was the change in turkey holdings. Current stocks at 71 million pounds compare with 79 million last April and the average of 75 million. Only 5 months ago, November 30, turkey stocks were the second largest on record. Shell egg holdings were up to almost 1.2 million cases by April 30, a gain of 698,000 cases over the previous month. In 1953 and 1954, stocks of at least one million cases were not reached until May 30. Frozen egg stocks increased seasonally to 125 million pounds. The April gain of 41 million pounds compares with 45 million last April at which time total holdings were 136 million. The average April gain is 38 million while average holdings are 122 million. Creamery butter stocks declined contraseasonally to 293 million pounds. These stocks were still double the average April 30 stocks but were about 20 percent under stocks reported a year earlier. American cheese holdings increased 3 million pounds during April to total 466 million by the end of the month. Current stocks were twice the April average and one percent larger than on April 30, 1954.

Meat and meat products

Refrigerated stocks of red meats declined seasonally during April to 823 million pounds. A year earlier, holdings totaled 706 million while 901 million is average for April 30. Beef holdings were down to 131 million pounds; pork, down to 542 million; but other meats were up slightly to 150 million pounds. Frozen pork totaled almost 400 million pounds, practically unchanged from the month before. Last April, stocks totaled 288 million pounds while 393 million is average. Dry salt pork stocks at 38 million pounds compares with 37 million a year earlier; the 103 million pounds of sweet pickled pork compares with 96 million reported last April.

Storage outlook

The seasonal rise in cooler occupancy during April is expected to continue into May. By the end of the month, cooler space utilization may be 2 to 3 points higher. Freezer occupancy, on the other hand, may level off during May or decline slightly.
