AGRICULTURAL PRICES - 1978 ANNUAL SUMMARY

This is the 20th annual bulletin summarizing monthly, season, and annual average price estimates published previously in Agricultural Prices and in the various annual publications showing Production, Disposition, and Value. Also, included are indexes of Prices Received by farmers for the period 1967-1978.

PRICES RECEIVED BY FARMERS

The series designated Prices Received by Farmers relates to the average prices farmers receive for their products - generally at the point of first sale. Points of first sale by farmers range from sales on a graded, packed and delivered basis to bulk sales at the farm. The average price concept is that price which would result from dividing the total dollars received by all farmers before any marketing charges are deducted for a commodity by the total quantity sold. These estimates, except as noted below, do not measure the price of specified grades, kinds, or varieties at a common point of sale.

Milk sold to plants, apples, peaches and citrus fruits are not estimated on the "as sold" basis. Milk is priced f.o.b. plant or receiving station. Apple and peach price series relate to the equivalent packinghouse-door returns for Washington and Oregon, to equivalent returns for bulk fruit at first delivery point for California and the price at point of first sale for other States.

Monthly Prices. Prices shown in the publication for most commodities are estimates of the average prices received by farmers for the entire month. For the following commodities, prices are collected during a 5-day period centered on the 15th of the month: hay, dry edible beans, dry field peas, eggs and turkeys. State commodity prices are generally estimated only for months when 0.5 percent or more of the annual sales occur.

Weights for computing monthly United States average prices from State average prices are based on the following: (a) Annual production or sales for calves, hogs, sheep and lambs, dry field peas; (b) January 1 inventory numbers for milk cows; (c) Estimated marketings during the month for all other commodities.

State season average prices are computed by weighting monthly prices by the estimated percentage of sales made each month in the marketing season. Also included in season average prices are allowances for unredeemed loans and purchases by the Government, if any, valued at the average loan and purchase rates by States. United States season average prices are computed by weighting State season average prices by the estimated quantities sold in each State. Marketing seasons for each commodity are shown on pages 125 and 126.

State annual average prices are computed by weighting monthly prices by the estimated proportion of the calendar year sales made each month except milk cow prices, which are a simple average. United States average prices are obtained by weighting State annual average prices by estimated quantities sold in each State.

PRICES PAID BY FARMERS

The State, Regional, and U.S. averages of prices paid by farmers for goods and services presented in this summary are based primarily on the voluntary reports of thousands of merchants and dealers throughout the Nation. These estimates of average prices, together with computed indexes and index ratios, relate to transactions about the 15th of the designated month. Price data underlying the estimates are collected from dealers and merchants at regularly recurring intervals by means of mailed inquiries and personal enumeration.

Prices paid by farmers are collected for major production items purchased. Since much of the data are collected by mail questionnaires, commodities are described or specified as simply as practicable. Reporters are asked to quote the price of the most commonly sold item that best fits the questionnaire definition or specification. Specifications vary considerably in amount of detail included. Some must, of necessity, be specific because the presence or absence of a certain feature may have a sizable effect on price. For example, in the case of tractors, horsepower classification and number of drive wheels materially affect price. Other commodities can be described in broad or general terms because various features are easily substitutable or the item has basic standard specifications. An example is "acetylene welder outfit" for which no specification other than "complete" is asked. Dealers are asked to report price of the size, grade, or quality of the item most commonly sold to farmers.

Beginning in January 1977, the Bureau of Labor Statistics (BLS) Consumer Price Index (CPI) was substituted for the Family Living Index. Price surveys for food and clothing were discontinued at the end of 1976. The last household furnishings survey was January 1977. These data were shown in the 1976 Agricultural Prices Annual Summary. The December farm machinery survey was also discontinued in 1976.

State or regional prices paid for feed, seed, fuels, and fertilizer, and U.S. prices for all commodities are published currently in AGRICULTURAL PRICES, a monthly report of the Economics, Statistics, and Cooperatives Service of the U.S. Department of Agriculture, Washington, D C. Regional prices for building materials, farm machinery, farm supplies, and pesticides, and State prices for motor supplies are first published in the Annual Summary in June of the following year.

Copies of this annual price summary are available upon request to the United States Department of Agriculture, Economics, Statistics, and Cooperatives Service, Washington, D C. 20250

1/ THE ALL HAY PRICE IS THE WEIGHTED AVERAGE OF THE SEPARATE KINDS. PRIOR TO JAN 1972 THESE WERE ALFALFA, CLOVER-TIMOTHY, LESPEDEZA, PEANUT VINE, GRAIN, WILD, AND ALL OTHER. IN JAN 1972 ALL KINDS EXCEPT ALFALFA WERE COMBINED. MID-MONTH PRICES ARE WEIGHTED BY THE ESTIMATED PERCENT SOLD EACH MONTH IN COMPUTING STATE SEASON AVERAGE PRICES. 2/ REFERS TO CROP OF YEAR DESIGNATED.
