ANNOUNCEMENT.

THIS is No. 1 of a series of statistical bulletins to be published by the United States Department of Agriculture. This series will include statistics on cold-storage holdings of certain food products; statistics on horses, mules, and tractors; sheep, lamb and mutton, and wool; vegetables; seeds; fruits; potatoes; carlot shipments of fruits and vegetables; wheat; tobacco; rye, oats, barley, rice, buckwheat, grain sorghum, and flax; cotton; hay and feed; cattle, calves, beef, veal, hides, and skins; hogs and pork; corn; dairy and poultry products.

UNITED STATES DEPARTMENT OF AGRICULTURE

STATISTICAL BULLETIN NO. 1

WASHINGTON, D. C.

SEPTEMBER, 1923

COLD-STORAGE HOLDINGS.

Year Ending January, 1923,
With Comparable Data for Earlier Years.

Prepared by the Bureau of Agricultural Economics.¹

INTRODUCTION.

The statistics of cold-storage holdings presented in this bulletin are compilations of the regular monthly reports made to the former Bureau of Markets and to the Bureau of Agricultural Economics.

For the purpose of these reports it is considered that a cold-storage warehouse is any place artificially cooled to a temperature of 45° F., or below, in which food commodities are stored and held for 30 days or more. It will be noticed that in the tables of capacity, space above a temperature of 45° has been listed. When the space survey was made, October, 1922, the concerns were asked to furnish particulars of all artificially cooled storage space, and for this reason all space has been included in the tables. Refrigerated space of a temperature from 45° to 60° is used by the meat-packing establishments for carrying stocks of oleo oil and lard for short periods and by some public cold-storage warehouses for certain varieties of fruits and vegetables.

Each cold-storage warehouse operator who stores apples, butter, cheese, eggs, poultry, frozen and cured pork and beef, frozen lamb and mutton and stocks of lard is requested to report holdings on the first business day of each month. Distant operators are requested to telegraph holdings of creamery butter, American cheese, and case eggs, and to mail complete reports of holdings of all commodities. A preliminary report of the holdings of the three commodities is made up as early as possible from the telegrams of distant operators and from the mailed reports of near-by operators. The preliminary

¹Prepared under the direction of J. O. Bell in the Market Statistics Section, Lewis B. Flohr, in charge.

reports of these commodities are issued on the fifth business day of each month. The mailed reports from all operators are tabulated and the complete report issued about the 15th of the month. Cold-storage warehouse operators storing fish are requested to report holdings on the 15th day of each month. The tabulation of these reports is completed by the Bureau of Agricultural Economics on the last business day of the month and the report is issued by the Bureau of Fisheries.

In making these reports it is necessary to estimate, on the basis of reports received, the probable holdings in the few concerns not reporting. The preliminary report of the holdings of creamery butter, American cheese, and case eggs is checked and corrected, when corrections are necessary, in the report of the holdings of all commodities made about the middle of the month. The variation between the two reports is very slight, usually less than 0.5 per cent. The reports made up each month from the mailed schedules are checked, and corrected when corrections are necessary, and the corrected figures published with the current figures of the next month. Occasionally discrepancies are found in the schedules which should be adjusted. If these apparent discrepancies are important, confirmation or correction is requested by telegram before reports are made up. Minor discrepancies are adjusted by correspondence, and therefore the corrections may not be made before the report is issued. These corrections are usually insignificant, relative to the total, but are made for the sake of accuracy.

After the schedules have been tabulated the results are carefully examined and approved by a representative board, consisting of statisticians and specialists who are familiar with the movements and market conditions of the commodities being reported, before the report is issued.

The bureau is entirely dependent upon the voluntary cooperation of the operators of cold-storage warehouses and meat-packing establishments for the information contained in these reports. The returns received each month represent from 95 to 99 per cent of the firms listed and 98 to 99 per cent of the stocks held in the country. Representatives of the bureau are sent out from time to time to check up lists, to locate new cold-storage warehouses, and to enlist the cooperation of operators, in order that the reports may be as complete as possible.

Work on the project of collecting cold-storage holdings was begun in October of 1914. The collecting of statistics on cold-storage holdings of apples began with January, 1915. The reporting of case eggs and creamery butter began on August 1, 1916. Although the report was not commenced until August of 1916, the tables show holdings from August, 1915. These were secured by asking those

reporting in 1916 to report also holdings of the previous year for the same month. American cheese was added to the list of commodities on September 1, 1916, and on January 1, 1917, the work was expanded to include reports on frozen beef, frozen pork, frozen lamb and mutton, dry salt pork, sweet pickled pork, cured beef, and lard. The statistics of holdings of meat products also included reports for 1916 which were reported in 1917 as of the previous year. Reports of the holdings of frozen fish began with October 15, 1917, and included reports for the same months of the previous year which supplied statistics of holdings beginning with October, 1916. Reports on stocks of frozen eggs and frozen poultry began with May 1, 1917, and packing stock butter was added to the list September 1, 1917.

The economic value of reports of cold-storage holdings of food commodities, both to the trade and to the general public, can not be overestimated. To the trade they supply a basis on which to forecast future business, and to the general public, a knowledge of the amount of such foodstuffs available for consumption.

¹ All concerns, excepting those of retail butchers, that are engaged in the business of curing meats or rendering lard are considered to be meat-packing establishments. Some meat-packing establishments also store goods for others. They are listed in Table 3 as "Meat-packing establishments doing a public cold-storage business."
