11451945--a record breaking storage year

In a number of ways the year, 1945, was an unusual storage year. Cooler occupancy which normally fluctuates 20 to 30 points between the low and high storage periods, in 1945 continued in a steadily downward trend from January to December, broken only by a 3-point rise during the height of the apple storage season. A number of records were broken during the year 1945. Record high stocks were held for pears, frozen fruits and vegetables, cream and poultry, while there was a decline over previous years in the storage of apples, pork, and shell eggs which set record lows for these commodities.

Fruits and vegetables

Fresh apples at the storage peak in 1945 were the scarcest they have been since 1921, only 19,940,000 bushels being stored on December 1. Pear storage was higher on October 1 than it has been at that date in any other year since figures have been gathered. Frozen fruits set an all-time record high on November 1, with 381 million pounds in storage. Blackberries, Young, Logan, and other similar berries, peaches, blueberries, and fruit juices were the fruit items stored in quantities significantly greater than in the past. Frozen vegetable stocks on November 1, likewise, reached the record high mark for storage holdings.

Meats and meat products

The year 1945 was one of comparative scarcity for meat items in storage. This low storage record was not true of beef, 267 million pounds of which was in storage July 1. Pork stocks, 168 million pounds on November 1, were 84 million pounds less than the previous low in 1938. On April 1 lard and rendered pork fat were the lowest they had been since November 1937.

Dairy and poultry products

The year 1945 was a fairly flush year for the storage of dairy products. Cream stocks reached an all-time high on August 1. Creamery butter stocks set a near record September 1, being exceeded only by the heavy 1943 stocks. Cheese stocks were likewise high during the year. The 229 million pounds stored September 1 were second only to the record stocks in 1943.

Shell egg holdings turned from record highs in 1944 to record lows in 1945. At the storage peak in 1945 there were only 5,926,000 cases of eggs in storage--the lowest since the first year records were kept. Frozen egg holdings, which have during the past years climbed steadily upward, were lower at the 1945 peak than they had been on any similar date since 1941. Dried egg stocks, too, were relatively scarce.

Poultry stocks went into storage in unsurpassed quantities during the last quarter of 1945. The 321 million pounds in storage December 1 exceeded the record of previous years, December 1, 1944, by 53 million pounds.
