STATISTICAL BULLETIN SERIES

The bulletins of the statistical series will contain available statistics on one or more commodities, annual, monthly, or weekly, on production, movement from the farm, receipts at markets, reshipments, farm and market prices, exports, imports, production in foreign countries, and foreign market prices, for the current year, together with comparable data for earlier years.

At the present time (September, 1926) statistical bulletins have been issued or are now in press as follows:

1. Cold-storage holdings.
2. Seed statistics.
3. Sheep, lamb, mutton, and wool statistics.
4. Cold-storage holdings.
5. Horses, mules, and motor vehicles.
6. Grain futures: Daily data.
7. Shipments and unloads of certain fruits and vegetables.
8. Carload shipments of fruits and melons.
9. Carload shipments of vegetables.
10. Statistics of potatoes and sweet potatoes.
11. Hay and feed statistics.
12. Wheat and rye statistics.
13. Cold-storage holdings.

INTRODUCTION

The statistics in this, the third, bulletin on cold-storage holdings include cold-storage warehouse space and cold-storage holdings of apples, dairy products, eggs, meats, lard, dressed poultry, and fish in the United States.

A survey of storage space of cold-storage establishments has been made by the Bureau of Agricultural Economics, from time to time, as of October 1. The space figures appearing in this bulletin are as of October 1, 1925.

For the purpose of determining what commodities and establishments to include, it is considered that a cold-storage warehouse is any place artificially cooled to a temperature of 45° F., or below, in which food commodities are stored and held for 30 days or more. Since some commodities not reported as in cold storage are stored in space cooled to temperature varying from 45° to 60° F., all refrigerated space is shown in the tabulation in order to make a complete report on refrigerated storage space.

Changes occur from year to year not only in the number of establishments but in the amount of space in the different temperature groups. New establishments are usually of considerable size; those that discontinue are often small. The amount of space at the different temperatures varies according to the demand for storage space for the various commodities.

Each operator of a cold-storage warehouse, whether public or private, who stores apples, pears, frozen and preserved fruits, dairy products, eggs, poultry, frozen and cured meats, and lard is requested to mail to the bureau a complete report of holdings of such commodities on the first business day of each month.

¹ This bulletin brings to dates shown the data originally published in Statistical Bulletin No. 4, "Cold-Storage Holdings."

² Prepared under the direction of William Broxton, Cold-Storage Report Section, and Lewis B. Flohr, Division of Statistical and Historical Research.

A weekly report on creamery butter, American cheese, case eggs, and poultry is issued by the bureau giving the holdings in 26 of the cities having the largest stocks of these commodities; this report covers about 75 per cent of the total holdings in the United States.

A daily report is issued from 10 cities, covering about 50 per cent of the total holdings in the United States. These weekly and daily reports take the place of the preliminary report which was discontinued in March, 1924.

The mail reports from all operators are tabulated and the complete report is issued about the twelfth day of the month. In compiling this report, it is necessary to estimate, on the basis of reports received, the probable holdings of the few concerns not reporting. These estimates are only a very small percentage of the total figures; and in the case of dairy products, eggs, and poultry they rarely reach 1 per cent. The quantities estimated on meats and lard usually run somewhat higher.

Occasionally discrepancies are found in the schedules which should be adjusted. If these apparent discrepancies are important, confirmation or correction is requested by telegram before the reports are made. Minor discrepancies are adjusted by correspondence, therefore these corrections may not be made before the next month. Corrections, although insignificant relative to the total, are made for the sake of accuracy. The reports compiled each month from the mailed schedules are checked against the schedule for next month and corrected when corrections are necessary, and the revised figures are published with the current figures of the succeeding month. This revision of the figures of the preceding month is final.

After the schedules have been tabulated and before the report is issued, the results are carefully examined and approved by a representative board consisting of statisticians and specialists who are familiar with the movements and market conditions of the commodities reported.

Operators of cold-storage warehouses storing and freezing fish are requested to report holdings as of the fifteenth of each month. The tabulation of these reports is completed about the last business day of each month. They are then turned over to the Bureau of Fisheries for release.

The Bureau of Agricultural Economics is entirely dependent upon the voluntary cooperation of the operators of cold-storage warehouses and meat-packing establishments for the information contained in these reports. The returns received each month represent from 95 to 98 per cent of the firms listed and 98 to 99 per cent of the stocks held in the country.

That the reports may be as complete as possible, representatives of the bureau are sent out from time to time to check up lists, to locate new cold-storage warehouses, and to enlist the cooperation of operators. It is essential to the accuracy of the reports that a feeling of good will and mutual understanding should exist between the bureau and the cooperating concerns, and to this end it is the policy of the bureau that its representatives make a personal contact for the furthering of that good will and mutual understanding. Trade journals and periodicals are constantly searched for information as to changes in and additions to the industry.

The arrangement of tables in the preceding bulletin on cold-storage holdings, Statistical Bulletin No. 4, was on a "crop year"

or seasonal basis. In this issue the calendar-year arrangement has been used, as it is thought that this arrangement will be found more suitable to the needs of the industry.

Reports of cold-storage holdings supply a basis on which the trade may forecast future business and give the general public a knowledge of the quantity of such foodstuffs available for consumption. Commodities are placed in cold storage during the period of greatest production and withdrawn for consumption during the period of low production, thereby insuring a better distribution of the supply throughout the year.

Current monthly figures of cold-storage holdings of all commodities but fish are published in the monthly statistical supplement to Crops and Markets. Details as to holdings of fish may be had as soon as compiled from the Bureau of Agricultural Economics, United States Department of Agriculture or from the Bureau of Fisheries, United States Department of Commerce.

FIG. 1. The census geographic divisions are used here

The map (fig. 1) shows the grouping of States into geographic divisions. The following table shows the percentage of holdings of the various commodities by geographic divisions, and is based on the seasonal year 1924-25:

Cold-storage stocks by geographic divisions for seasonal year 1924-25
