Summary of 1946 Cold Storage Holdings

By A. S. Walker*
Agricultural Economist

Occupancy of public cold storage warehouses during 1946, the first year after World War II, was at a much higher level for both coolers and freezers than in prewar years. This was true despite the fact that gross space in public warehouses had been expanded 52 million cubic feet from 1939 to the end of the war. Cooler occupancy during 1946 ranged from a low of 60 percent to a high of 80 percent. Freezer occupancy during 1946 ranged from 79 percent to 88 percent. These percentages compare with a 1940 prewar range of from 36 to 61 percent for coolers and 55 to 71 for freezers.

The year 1946 was a record-breaking storage year in many ways. In September, warehouses were carrying an all-time record load of perishables with 4.5 billion pounds in storage. During 1946, record highs were reached for holdings of pears, frozen fruits and vegetables, and frozen poultry, whereas stocks of pork and lard were at an all-time low.

Fruits and vegetables

At the storage peak on December 1, fresh apples in storage totaled 33.4 million bushels. This quantity exceeded the 1945 average December 1 apple stocks by about 4 million bushels and was 14 million bushels greater than the abnormally low stocks of 1945. Three million bushels more pears were stored at the 1946 peak than at the peak of any previous year. Frozen fruits and vegetables reached new record highs in 1946. At the 1946 low point in storage stocks, carry-over in fruits from the 1945 season was very great, totaling 278 million pounds. This carry-over greatly increased the record storage stocks of 510 million pounds on November 1. Large reserves of frozen vegetables also remained in storage at the seasonal low point and were a contributing factor to the 351 million pounds stored at the peak.

Valuable assistance in the compilation of this report was given by: Melvin R. Panks, Margaret G. Colburn, Helen D. Howells, Thelma E. Lewis, Alice P. Lovett, Ellen Shannon and Anna Mae Turner.

Meats and meat products

Meat stocks were at record lows during the last half of 1946, reaching an all-time low of 228 million pounds in storage on October 1. The year 1946 was the second consecutive year in which storage stocks of meats were comparably small. Holdings of beef were not so far below average as were holdings of pork for the last part of 1946. Whereas beef stocks during the first quarter of the year were well above average. The seasonal into-storage movement of pork during the latter part of 1946, began a month earlier than usual. Reserves of lard and rendered pork fat were at near record lows throughout 1946, reaching the all-time low of 30 million pounds on October 1.

Dairy and poultry products

In general dairy products were stored in below-average quantities during 1946 whereas poultry and eggs were stored in quantities which exceeded the 1941-45 average. There were exceptions, however. Stocks of frozen cream reached 1.6 million pounds on September 1--more than three times the average. Butter holdings were much below average throughout the year, whereas 1946 average cheese stocks were 50 million pounds less than the 1941-46 average stocks. The storage of shell eggs during 1946 was above normal. Average holdings of shell eggs were almost a million more than the 1941-45 average reserves. Frozen egg stocks which totaled 265 million pounds in storage at the year-end peak were slightly below average. Holdings of dressed poultry were high throughout 1946. Poultry stocks reached an all-time peak on February 1. Although a record quantity of poultry was moved from storage during the period January to July 1, 1946, holdings at the seasonal low point were 174 million pounds. Stocks of turkeys in storage on the first of each month in 1946 established a new record for that month, and an all-time record of 135 million pounds was reached on March 1.

5-year average regional holdings

Because of the numerous requests for comparative data on regional cold storage holdings, tables are included in the second half of this publication giving 5-year average holdings of 34 commodities. Comparable figures for a number of commodities on which current statistics are gathered, are not available for a 5-year period. In some instances, therefore, 4-year averages are given. In an effort to keep down the size of this report, itemized breakdowns have been omitted on a few commodities for which no considerable number of requests for such information have been received. However, over-all averages for such commodities, however, have been included. The 5-year regional average for commodities itemized can be obtained by writing to the Marketing Facilities Branch, Production and Marketing Administration, Washington 25, D. C.

Data for this report were collected from public, private, and semi-private warehouses, apple houses and meat-packing plants. All commodities owned by the Government, except those in space owned or leased and operated by the Armed Services, are included. Products held in space operated as a part of a wholesale or retail food business, hotels or restaurants where food is not held for 30 days or more and commodities held in individual lockers of less than 25 cubic feet capacity, are not covered by this report.
