Prices Received by Farmers

Potatoes and Sweetpotatoes, by State and United States, 1949-78

PRICES RECEIVED BY FARMERS: POTATOES AND SWEETPOTATOES, BY STATE AND UNITED STATES, 1949-78. Crop Reporting Board, Statistical Reporting Service, U.S. Department of Agriculture, Statistical Bulletin No. 699.

ABSTRACT

This publication presents final estimates of prices received by farmers for potatoes and sweetpotatoes, by State and United States, for the period 1949-78. This report continues the price series for potatoes published in Statistical Bulletin No. 140, issued March 1954, and sweetpotatoes published in Statistical Bullein No. 163, issued June 1955.

INTRODUCTION

Each monthly price in this report is an average of prices received by farmers for all potatoes or sweetpotatoes sold during the entire month, and includes sales of all grades, sizes, varieties, and utilizations. Potatoes and sweetpotatoes are priced at the point of first sale and can vary from bulk sales of ungraded, unwashed potatoes sold field-run at the farm, to sales of graded, washed, and packaged potatoes delivered to a retail market. Monthly prices are estimated only for months when 0.5 percent or more of the State's total sales for the crop year occur. Monthly U.S. average prices are computed by weighting the State average prices by the estimated marketings for that month.

State season average prices are calculated by weighting the monthly prices for the crop year by the estimated sales for each month. U.S. season average prices are computed by weighting State season average prices by the estimated quantity sold in each State for that crop year. The crop year for sweetpotatoes starts with July of the designated year and extends through June of the following year. The beginning of the crop year for potatoes ranges from November of the preceeding year for California's winter crop, to September and October of the designated year for the fall crop in certain Northern States. The marketing seasons for winter, spring, and summer crops are usually over shortly after harvest. However, because much of the fall crop is put into storage, it can be marketed up through July or August of the year following harvest.

Shifts in a State's relative importance in potato production can change the monthly and/or season average price estimating requirements for that State. This explains why prices may be present for some but not all of the years for a given State.

Prices in this report are used to calculate value of production and sales, cash receipts, gross farm income, parity prices, and the index of prices received by farmers.
