FIELD CROPS

PRODUCTION, FARM USE, SALES, AND VALUE, BY STATES, 1975-1977

This report is one of a series dealing with farm disposition of major farm products, and presents data for 1975, 1976 and 1977 for specified commodities. It shows estimated production, quantity used on farms where produced, quantity sold, price, and value. The farm use, sales and value data shown in this report are for the marketing season or crop year. Production shown for each commodity is that published in the 1977 Annual Crop Production Summary. All data for the 1977 crop are preliminary.

Estimates of farm use and sales relate to the disposition of a given year's production within the marketing season shown regardless of time of actual disposition. Quantities going into Government resale programs at the end of a current marketing year are included in sales. Therefore, resale grains stored on farms are included in the disposition during the marketing season for the year of production.

Sales of some commodities are estimated directly from an analysis of survey data in which farmers report production and sales. For others, special disposition surveys are made in which farmers report their production of each commodity as well as the quantities used on their farms for each purpose. When possible, sales have been checked by enumeration, such as reports of processors, or by records of handling and shipments by rail, truck, and boat. The entire production is considered sold for commodities with virtually no farm use.

State season average prices for most crops published in this report are computed by weighting midmonth or monthly prices by the estimated percent sold each month. For 1977 midmonth prices are weighted by estimated sales through February 1978 with an allowance for marketings during the remainder of the marketing season. Monthly prices are not available for hops, rye, rice, wrinkled seed peas, therefore, special survey data are used as the basis for the season average price. The State and United States season average prices for barley, dry edible beans, corn, flaxseed, oats, rice, rye, sorghum for grain, soybeans, and wheat include an allowance when applicable for unredeemed loans and purchases by the Government valued at the average loan and purchase rate, by States. The United States season average price shown for each crop is computed by dividing the U S value of sales by quantity sold. A United States season average price weighted by production can be derived by dividing the U S value of production by quantity produced.

The season average prices for quantities sold are also used to evaluate values of total quantities produced, and quantities used on farms. Value of sales is computed by applying the unit price to quantity sold during the marketing year. In like manner, value of production is computed by applying the season average price to the quantity produced. The value estimates shown should not be confused with cash receipts which relate to the calendar year irrespective of the year of production.

Season average price and value of production do not include Government payments under the disaster and deficiency payments program.

The U S monthly farm sales as a percent of the marketing year sales for selected crops are shown on page 40. The marketing season for each crop is shown on page 41.
