FIELD CROPS

Production, Farm Use, Sales, and Value, by States, 1978-1979

This report is one of a series dealing with farm disposition of major farm products, and presents data for 1978 and 1979 for specified commodities. It shows estimated production, quantity used on farms where produced, quantity sold or to be sold, price, and value. The farm use, sales and value data shown in this report are for the marketing season or crop year. Production shown for each commodity is that published in the 1979 Annual Crop Production Summary. All data for 1980 are preliminary.

Estimates of farm use and sales relate to the disposition of a given year's production regardless of time of actual disposition. Quantities in Government resale or reserve programs at the end of a current marketing year are included in sales. Therefore, resale and reserve grains stored on farms are included in the disposition for the year of production.

Sales of some commodities are estimated directly from an analysis of survey data in which farmers report production and expected sales. For others, special disposition surveys are made in which farmers report their production of each commodity as well as the quantities used on their farms for each purpose. The entire production is considered sold for commodities with virtually no farm use.

State season average prices for most crops published in this report are computed by weighting monthly prices by the estimated percent sold each month. For 1979, monthly prices are weighted by estimated sales through February 1980 with an allowance for marketings during the remainder of the marketing season. Monthly prices are not available for hops, rye, and wrinkled seed peas. Therefore, special survey data are used as the basis for the season average price. The State and United States season average prices for barley, dry edible beans, corn, flaxseed, oats, rice, rye, sorghum for grain, soybeans, and wheat include an allowance when applicable for unredeemed loans and purchases by the Government valued at the average loan or purchase rate, by States. The United States season average price shown for each crop is computed by dividing value of sales by quantity sold.

The season average prices for quantities sold are also used to compute values of total quantities produced, and quantities used on farms. Value of sales is computed by applying the unit price to quantity sold during the marketing year. In like manner, value of production is computed by applying the season average price to the quantity produced. The value estimates shown should not be confused with cash receipts which relate to the calendar year sales irrespective of the year of production.

Season average price and value of production do not include Government payments under the disaster and deficiency payments program.

The U.S. monthly farm sales as a percent of the marketing year sales for selected crops are shown on page 18. The marketing season for each crop is shown on page 19.
