Noncitrus Fruits and Nuts

1994 Summary

Utilized Production Up 4 Percent, Value Up Slightly

The Nation's utilized production of the leading noncitrus fruit crops, totaled 17.2 million tons in 1994, up 4 percent from 1993. Larger crops of apples, apricots, avocados, bananas, sweet and tart cherries, cranberries, guavas, nectarines, pears, California plums, California prunes, other prunes and plums, and strawberries were produced. Utilized production decreased for berries, dates, figs, grapes, kiwifruit, olives, papayas, peaches and pineapples.

Value of utilized production for noncitrus fruit crops totaled \$6.16 billion, up slightly from 1993. Prices were available for all fruit crops at this time except cranberries. Value estimates for cranberries will be available August 15, 1995. In order to estimate a value, cranberry season average prices for 1993 were used, multiplied by 1994 production.

Highlights

Apple production for 1994 was estimated at 11.2 billion pounds, 6 percent more than 1993 and 7 percent above 1992. Utilized apple production in Washington and California increased 12 percent and 19 percent from last year, respectively, making it their largest crops on record.

Utilized grape production for 1994 was estimated at 5.87 million tons, down 2 percent from 1993 and 3 percent from the 1992 crop. California production was down 2 percent from last year. Large increases in Michigan, New York, and Pennsylvania production were offset by a large decrease in Washington.

Peach production was set at 2.35 billion pounds, down 6 percent from last year and 1992. Production of the crop was affected by an extremely cold winter, especially in Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia where no significant production was recorded in 1994 due to freeze damage.

Pear production was placed at a record high 1.05 million tons, 10 percent more than 1993 and 13 percent above 1992. The Pacific states (California, Oregon and Washington), which accounted for 97 percent of the U.S. pear production, enjoyed favorable conditions throughout most of the growing season.

Nut Production increases 4 Percent, Value Down 12 Percent

The 1994 U.S. nut production increased 4 percent to 1.02 million tons. Pecan production decreased 45 percent from last year. Smaller crops of hazelnuts, pistachios, and walnuts were produced. Utilized production increased this year for almonds and macadamia nuts. Almond production was a record high crop.

The 1994 value of utilized production for the six crops totaled \$1.51 billion, down 12 percent from last year. Values were lower for almonds, hazelnuts, pecans, pistachios, and walnuts. Values were higher for macadamia nuts.

Noncitrus Fruits and Nuts: Bearing Acreage and Yield per Acre,
by Crop, United States, 1992-94

Total	680,030	680,430	677,400	--	--	--

1/ Bearing acreage estimates are primarily based on periodic orchard and vineyard surveys. In non-survey years, acreage is based on trends, county extension service data, end of year production surveys and other indications. 2/ Yield is based on total production which includes unharvested production and fruit harvested but not sold due to market conditions, except bananas, guavas, berries, and nuts which are utilized production yields. 3/ Harvested acreage. Yield based on utilized production. 4/ In 1992, 12,500 acres of raisin grapes were enrolled in the CA Raisin Industry Diversion program (RID). There were 20,000 acres in 1993 and none in 1994. These acres have been deducted from bearing acres for yield calculations. 5/ Papaya yields not calculated because only utilized production is estimated. 6/ Pineapple acreage is total acres in crop, not harvested acreage. Pineapple yields are not estimated. 7/ Idaho, Michigan, Oregon, and Washington. 8/ Pecan bearing acreage and yield not estimated.

- 1/ Cranberries paid for by processors and lost because of dehydration and berry breakdown after delivery.
- 2/ Weighted average of co-op and independent sales. Co-op prices represent pool proceeds excluding returns from non-cranberry products and before any deductions for capital stock and other retains.
- 3/ Estimates for 1994 will be published on August 15, 1995.

- 1/ Bearing acreage estimates are primarily based on periodic vineyard surveys. In non-survey years, acreage is based on trends, county extension service data, end of year production surveys and other indications.
- 2/ Yield is based on total production which includes unharvested production and fruit harvested but not sold due to marketing conditions.
- 3/ In 1994, no acres of raisin grapes were enrolled in the CA Raisin Industry Diversion program (RID). There were 20,000 acres in RID in 1993 and 12,500 acres in 1992. These acres have been deducted from bearing acres for yield calculations.

1/ Data not published for some States to avoid disclosure of individual operations. 2/ Bearing acreage estimates are primarily based on periodic orchard surveys. In non-survey years, acreage is based on trends, county extension service data, end of year production surveys and other indications. 3/ Yield is based on total production which includes unharvested production and fruit harvested but not sold due to marketing conditions. 4/ Processed mostly canned but includes small quantities dried and other uses not published separately to avoid disclosure of individual operations.

Definitions of Terms

Total Production - is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic or natural reasons.

Utilized Production - is the amount sold plus the quantities used at home or held in storage.

Unutilized Production - is the difference between total and utilized production which is fruit not harvested for economic or natural reasons and harvested fruit not sold or utilized.

Utilization - refers to first utilization, not necessarily final utilization. For example, frozen fruit includes some fruit that may be later used for making preserves. Grade-outs for fresh market fruit which are processed are included in the processing quantity. Fruit graded-out from canning or freezing and utilized for juice is included with juice.

Apples, Commercial Crop - orchards of 100 or more bearing age trees.

Prices - are a marketing year average for all methods of sale. For a crop sold for both fresh market and processing, the **marketing year average price (MYAP)** is a weighted average of the fresh and processing price.

Prices for fresh fruit are the average prices producers receive at the point of first sale. This is commonly referred to as the **average price as sold**. Since the point of first sale is not the same for all producers, prices for the various methods of sale are weighted by the proportionate quantity sold. For example, if in a given State part of the fruit is sold f.o.b. packed by growers, part is sold as bulk fruit at the packinghouse door, and some is sold retail at roadside stands, the fresh fruit **average price as sold** is a weighted average of the average price for each method of sale. The exception is fresh fruit sales in California, Washington, New York (apples only) and Oregon (except peaches) which are equivalent returns at packinghouse door. The equivalent packinghouse returns represent adjusted prices.

F.o.b. packed prices are adjusted to an equivalent incoming packinghouse door price by subtracting all costs that accumulate between the incoming packinghouse door and the f.o.b. price. These costs include grading, packing, inspecting fees, selling, and other costs.

Prices for fruit sold for processing are equivalent returns for fruit delivered to the processing plant door except for cranberries and California olives and clingstone peaches which are priced at the first delivery point.

Crop value estimates in this report cover the marketing season or crop year and should not be confused with cash receipts from these crops which are on a calendar year.

The following procedure is used to compute State values for all commodity groups:

State Value Computation Procedure

Fresh Market Value = Fresh Market MYAP x Fresh Market Utilization
Process Market Value = Process Market MYAP x Process Market Utilization
"All" Sales Value = Fresh Market Value + Process Market Value
"All" Sales MYAP = "All" Sales Value Divided By
"All" Sales Utilization

For commodities with components not identified by market channel, substitute breakdown name for fresh/processing market and use the same procedure. The procedure used for computation of U.S. Marketing Year Average Prices follows:

U.S. MYAP Computation Procedure

Fresh Market MYAP = Fresh Market Value For All States Divided By
Fresh Market Utilization For All States
Process Market MYAP = Process Market Value For All States Divided By
Process Market Utilization For All States
"All" Sales MYAP = Sales Value For All States Divided By
Sales Utilization For All States

Fruits (Noncitrus): Marketing Seasons for Specified Crops ^{1/}

Apples:	All South Atlantic States, Kentucky, Tennessee, Indiana, Illinois, Missouri, Arkansas, New Mexico, and California, June 1 to May 31; all other States, July 1 to June 30, except Washington and Oregon where the bulk of the crop is marketed August 1 to July 31.
Apricots:	Fresh Fruit -- May 25 to August 20. Canning -- June 15 to August 15. Dried -- California, June 20 to August 20.
Avocados:	California -- November 1 to November 30 (following year). Florida -- June 20 to Feb 28.
Bananas:	January 1 to December 31.
Cherries:	Fresh Fruit -- Sweet varieties, May 1 to August 15; Tart varieties, June 15 to August 20.
Cranberries:	September 5 to December 20.
Dates:	August 15 to March 15.
Figs:	Fresh Fruit -- June 5 to October 15. Canning -- August 1 to October 15. Dried -- California, June 20 to October 31.
Grapes:	Fresh Fruit -- California, May 25 to April 30; Arizona, June 5 to July 15; All other States, July 10 to October 31. Crushed for Juice, Wine and Brandy -- August 1 to December 15. Dried for Raisins -- California, September 1 to May 30.
Kiwifruit:	November 1 to April 30.
Nectarines:	June 10 to August 31.
Olives:	September 25 to March 15.
Papayas:	January 1 to December 31. (Peak harvest May 15 to July 15 and September 15 to December 15).

^{1/} See footnote at end of table.

Fruits (Noncitrus): Marketing Seasons for Specified Crops--continued 1/

Peaches: **Fresh Fruit** -- Georgia and South Carolina, May 20 to August 31; Other South Atlantic States, South Central States, and California, June 1 to September 30; New England States, New York, Michigan, and Idaho, August 1 to September 30; all other States, July 1 to September 30.

Canning -- California, July 1 to September 10.

Dried -- California, August 1 to October 10.

Pears: **Fresh Fruit** -- California, July 1 to April 30; Washington and Oregon, August 10 to May 31; Other States, July 1 to December 15.

Canning and Dried -- California, Washington and Oregon, August 1 to November 30.

Pineapples: January 1 to December 31. (Peak harvest March 1 to July 31).

Plums: **Fresh Fruit** -- California, May 25 to September 30.

Canning -- California, June 1 to September 30.

Prunes: **Dried** -- California, August 1 to April 31.

Prunes and Plums: **Fresh Fruit and Canning** -- Idaho, Michigan, Oregon and Washington, August 10 to October 20.

1/ See footnote at end of table.

Tree Nuts 1/

Almonds:	August 5 to November 15.
Filberts: (Hazelnuts)	October 1 to September 30.
Macadamia Nuts:	January 1 to December 31 (Peak harvest August 1 to December 31).
Pecans:	September 30 to March 15.
Pistachios:	September 1 to October 31.
Walnuts:	September 15 to December 30.

1/ For detail by States, see Agricultural Handbook No. 186, **"Fruits and Tree Nuts, Blooming, Harvesting, and Marketing Dates"**, December 1975.
