Noncitrus Fruits Highlights

In 2016, the Nation's utilized production of the leading noncitrus fruit crops totaled 18.7 million tons, up 2 percent from 2015. Fresh utilized production for 2016 noncitrus fruit crops totaled 8.02 million tons, up 4 percent from the revised previous year. Processed utilized production totaled 10.6 million tons, virtually unchanged from 2015. The commodities showing the largest percentage increase in utilized production from the previous year were apricots, kiwifruit, and tart cherries.

The value of utilized production for 2016 noncitrus fruit crops totaled 16.6 billion dollars, up fractionally from the previous year. The commodities showing the largest percentage increase in value of utilized production from the previous year were kiwifruit, apricots, and figs. Bearing acreage for major deciduous fruit crops totaled 1.70 million, down 2 percent from 2015. Bearing acreage for miscellaneous noncitrus fruits totaled 362,530, down 1 percent from the revised 2015 crop year.

(X) Not applicable.

¹ Harvested acreage. Yield based on utilized production.

² Estimates discontinued in 2015.

³ Excludes California. Estimates discontinued in 2016.

⁴ Production is rounded to the nearest 1,000 barrels prior to converting to tons fresh equivalent.

Fruits and Nuts Bearing Acreage – United States: 2014-2016

Year	Citrus Fruits ¹	Major Deciduous Fruits ²	Miscellaneous Noncitrus ³	Nuts ⁴	Total
	(acres)	(acres)	(acres)	(acres)	(acres)
2014	777,700	1,733,790	361,555	1,427,000	4,300,045
2015	764,900	1,726,730	366,700	1,503,000	4,361,330
2016	737,800	1,698,670	362,530	1,939,700	4,738,700

¹ Grapefruit, lemons, oranges, tangelos, and tangerines.

² Commercial apples, apricots, cherries, grapes, nectarines, peaches, pears, plums, and prunes.

³ Avocados, bananas, berries, coffee, cranberries, dates, figs, guavas, kiwifruit, olives, papayas, and strawberries. Bearing acreage estimates for guavas discontinued in 2015.

⁴ Almonds, hazelnuts, macadamia nuts, pecans, pistachios, and walnuts. Bearing acreage estimates for pecans began in 2016.

Noncitrus Fruits Utilized Production by Type of Utilization – United States: 2014-2016

	(dollars)	(dollars)	(dollars)	(1,000 dollars)	(1,000 dollars)	(1,000 dollars)
California	4.000	3.130	2.440	7,388,000	5,868,750	5,158,160
United States	4.000	3.130	2.440	7,388,000	5,868,750	5,158,160

¹ Yield is based on utilized production.

² Production includes inedible quantities of no value as follows: 2014 - 23.0 million pounds; 2015 - 25.0 million pounds; 2016 - 26.0 million pounds.
Shelling ratios are: 2014 - 0.604; 2015 - 0.583; 2016 - 0.595.

³ Price and value are based on the edible portion of the crop only.

Noncitrus Fruits Comments

Apples: Total apple production for 2016 is estimated at 11.3 billion pounds, up 12 percent from 2015. Bearing acreage totaled 322,600 down 1,180 acres from the previous season. Total yield for the 2016 crop was up 13 percent to 34,900 pounds per acre. The all price for the 2016 crop, at 32.0 cents per pound, was down 1.6 cents per pound from the previous season. United States total value for the 2016 season was \$3.46 billion dollars, up 3 percent from the 2015 season.

Washington growers experienced favorable weather and reported a high quality crop. Harvest began one to two weeks earlier than normal as a result of positive weather conditions. Michigan growers generally saw excellent fruit quality and yields while New York had regional weather events that limited quality and crop potential.

Beginning in 2016, apple estimates were discontinued in Arizona, Colorado, Indiana, Iowa, Missouri, New Hampshire, Rhode Island, Tennessee, and Utah.

Apricots: Total apricot production for 2016 is estimated at 64,050 tons, up 40 percent from 2015. Bearing acreage totaled 9,700, down 520 acres from the previous season. Total yield for the 2016 crop was up 48 percent to 6.60 tons per acre. The all price for the 2016 crop, at 898 dollars per ton, was down 11 percent from the previous season. United States total value for the 2016 season totaled 57.4 million dollars, up 25 percent from the 2015 season.

For California apricots, the 2016 crop represented a return to normal growing conditions from 2015's drought. In addition to more favorable rainfall, growers reported lower than ideal levels of chilling, but substantially better than 2015 levels, and enough to encourage a good bloom. Fresh market apricots were reported to be harvested in April, with Patterson apricots, used mostly for processing, being harvested in early to mid-June.

Beginning in 2016, apricot estimates were discontinued in Utah.

Avocados: Utilized production for 2016-2017 is estimated at 171,380 tons, down 25 percent from the revised previous year. The California crop, accounting for 86 percent of the United States utilized production, was down 27 percent from 2015-2016. Bearing age acreage in the United States, at 57,430, was down 3 percent from the previous season. The value of the 2016-2017 crop was down 27 percent from the 2015-2016 crop year in all States. The price was down in California and Hawaii but up in Florida.

The bearing age acreage in California continues to remain steady, however in Florida and Hawaii acreage is decreasing. The Laurel Wilt disease continues to have a negative impact on the Florida avocado groves. Each year, additional commercial avocado trees are destroyed by this disease.

Bananas: Hawaii's total production for 2016, at 5.60 million pounds, was down 39 percent from the revised 2015. Bearing acreage totaled 700, down 100 acres from the revised previous season. Total yield, at 8,000 pounds per acre for the 2016 crop, was down 30 percent. The all price for the 2016 crop, at 1.01 dollars per pound, was up 9.8 cents per pound from the previous season. Hawaii banana crop total value for the 2016 season was 5.59 million dollars, down 32 percent from the revised 2015 season.

The 2016 banana crop in Hawaii continued to be affected by the banana bunchy top virus, which stunts the growth of plants and deforms the fruit. Reported labor shortages in Hawaii continued to impact the State's agricultural sector, including bananas.

Blackberries: Total 2016 United States blackberry production is estimated at 58.4 million pounds, up 14 percent from 2015. Harvested acreage totaled 7,000, up 80 acres from the previous season. The average yield, at 8,290 pounds per acre, was up 13 percent from the previous year.

Blackberry harvest started the week ending July 17 and producers reported larger amounts of blackberries harvested than the previous season.

Beginning in 2016, evergreen variety estimates were discontinued.

Blueberries, Cultivated: Total 2016 United States cultivated blueberry production is estimated at 594 million pounds, up 5 percent from 2015. Harvested acreage totaled 92,800, up 2 percent from the previous season. The average yield, at 6,340 pounds per acre, was up 3 percent from the previous year.

Oregon growers reported a good crop that was aided by warm days which helped reduce disease pressure. Michigan blueberry growers reported a mild winter and an average spring which helped the plants to grow and thrive normally with few issues. A dry summer helped to control spotted wing drosophila (SWD) and mummy berry, but the biggest issues growers faced this year came from labor shortages and lower prices. Some producers in Washington reported fungus and SWD which decreased yields.

Beginning in 2016, cultivated blueberry estimates were discontinued in Alabama, Arkansas, and Indiana.

Blueberries, Wild: Total 2016 United States wild blueberry production is estimated at 102 million pounds, up 1 percent from 2015. Harvested acreage totaled 23,100, up 3 percent from the previous season. The average yield, at 4,400 pounds per acre, was down 2 percent from the previous year.

As of the week ending September 11, 2016, ninety-nine percent of the Maine blueberries were harvested. Maine blueberry yield declined due to the drought.

Boysenberries: Total 2016 United States boysenberry production is estimated at 2.16 million pounds, down 12 percent from 2015. Harvested acreage totaled 340, down 10 acres from the previous season. The average yield, at 6,320 pounds per acre, was down 10 percent from the previous year.

Boysenberry yields were lower than the previous year due to a combination of factors. Some producers reported insect problems and others experienced dry weather.

Cherries, Sweet: Utilized sweet cherry production for 2016, at 343,090 tons, was up 3 percent from 2015. Two of the four estimating States (Michigan and Oregon) showed increased production from last season, while California and Washington showed a decrease.

Growers in Michigan reported warmer temperatures, timely rains, good pollinating conditions, and minimal damage from frost. In Oregon, growers reported a record early harvest start. In California, the season began and ended early. The 2016 production decreased from the previous year and was about 30 percent below the pre-drought average. Growers in Washington reported an early start to the season. Excessive heat in the spring, followed by rain events, resulted in a lighter crop.

Beginning in 2016, sweet cherry estimates were discontinued in Idaho, Montana, New York, and Utah.

Cherries, Tart: Utilized tart cherry production for 2016 is estimated at 324 million pounds, up 29 percent from 2015. Four of the five estimating States (Michigan, Utah, Washington, and Wisconsin) showed increased production from last season, while New York showed a decrease.

In Michigan, the largest producing State, harvest began in early July with fruit ripening quickly due to warm temperatures. In Utah, growers reported excellent yields that were higher than the previous year. Washington growers reported a record early harvest start. In Wisconsin, a mild winter and plenty of rain led to a near record crop. In New York, production was lower due to a freeze event during the bloom period which limited crop potential in some areas.

Beginning in 2016, tart cherry estimates were discontinued in Oregon and Pennsylvania.

Coffee: Hawaii utilized coffee production totaled 28.6 million pounds (cherry basis) for the 2016-2017 season, down 5 percent from the revised previous season. Bearing acreage totaled 7,000, up 100 acres from the previous year. Average yield, at 4,180 pounds (cherry basis) per acre, was down 420 pounds from the revised previous year.

Coffee farmers on the Big Island in Hawaii experienced a rough growing season due to dry weather. Many growers were forced to file crop insurance claims due to the extended dry period from October to March. Coffee Berry Borer continues to be a major problem, mostly for the smaller producers who are unable to afford the remedial spray.

Cranberries: United States 2016 total cranberry production is estimated at 9.63 million barrels, up 12 percent from 2015. Harvested acreage totaled 41,500, up 600 acres from the previous season. The average yield, at 230.0 barrels per acre, was up 11 percent from the previous year.

Wisconsin experienced a very good growing season for all crops and cranberries were no exception. Despite some complaints of rot and poor fruit quality, many growers reported having a record year. The 2016 crop year in Massachusetts was impacted by drought which led to some water rationing and delayed harvest.

Dates: Utilized date production is estimated at 38,040 tons for the 2016 season, down 2 percent from the previous season. Bearing acreage totaled 12,400, up 2,200 acres from the previous year as a result of Arizona being included in the annual estimating program. Average yield, at 3.07 tons per acre, was down 0.75 ton, from 2015.

The weather conditions were optimal for date production. Lower rainfall did not impact the crop, since dates do not require a lot of water. The lower yield is due to young trees now becoming of bearing age with lower production than the fully mature trees.

Beginning in 2016, date estimates began in Arizona.

Fig: California utilized fig production is estimated at 31,600 tons for the 2016 season, down slightly from the previous season revised estimate. Bearing acreage totaled 6,100, down 300 acres from the revised previous year. Average yield, at 5.18 tons per acre, was up 0.23 ton from 2015.

During the 2016 season, bearing age acreage continued to show a declining trend. However, this was the highest yield per acre since the 2007 season. Price continued to increase from previous years.

Grapes: Utilized grape production for 2016 is estimated at 7.67 million tons, up 1 percent from the revised 2015 total. The California crop, which accounted for 88 percent of the 2016 United States utilized grape production, was down 1 percent from the previous year. Bearing acreage, at 1.01 million for the 2016 season, was down 1 percent from the revised 2015 acreage. California bearing acres for the 2016 season was down 15,000 acres from the previous year. In 2016, the value of utilized production totaled 6.26 billion dollars, up 6 percent from the revised 2015 value of 5.91 billion dollars. California's 2016 utilized production was valued at 5.58 billion dollars, accounting for 89 percent of the overall United States value of utilized production.

In California, high summer temperatures affected some vineyards. Washington producers reported an excellent production year that lead to higher yields. Mild spring temperatures in Michigan prompted earlier than normal bud development. Cooler summer temperatures delayed crop development until August when warm temperatures moved the season ahead of normal. Michigan growers reported the crop to be heavy with good sugar accumulation.

Beginning in 2016, grape estimates were discontinued in Arkansas and Georgia.

Guavas: Beginning in 2015, guava estimates were discontinued in Hawaii.

Kiwifruit: Utilized production in California for 2016 totaled 28,300 tons, up 35 percent from the previous year revised production. Acreage, at 3,700, was down 200 acres from the revised previous season. The value of the 2016 crop was up 45 percent from the revised 2015 crop year to 44.4 million dollars, and the price for the 2015 season was up 100 dollars per ton to 1,570 dollars.

The California kiwifruit crop enjoyed good growing conditions throughout the season. Beneficial weather conditions prevailed with good bloom and chilling hours. Growers reported better pollination than in previous years and indicated the crop reflected good quality and sizing.

Nectarines: Utilized nectarine production is estimated at 167,800 tons for the 2016 season, down 3 percent from the revised previous season. Bearing age acreage totaled 20,200, down 1,000 acres from the revised previous year. Average yield, at 8.31 tons per acre, was up 0.03 ton from the revised previous year.

The 2016 California nectarine crop was inconsistent across varieties with some growers reporting ripening 2 to 3 weeks earlier than normal. Despite another year of water shortages, nectarine yields were slightly up from 2015. Early season high temperatures affected fruit sizing. Growers struggled with labor shortages. Overall, yield and quality were generally good.

Olives: California utilized olive production is estimated at 159,600 tons for the 2016 season, down 11 percent from the previous season. Bearing acreage totaled 35,000, down 1,000 acres from the previous year. Average yield, at 4.56 tons per acre, was down 0.41 ton from the previous year.

The California olive crop had an average bloom. The bloom was mixed as growers reported rainy weather and some hail resulting in variable crop yields. The prevalent drought conditions negatively impacted the 2016 olive crop.

Papaya: Hawaii's total production for 2016, at 19.8 million pounds, was down 28 percent from 2015. Bearing acreage totaled 1,300, down 200 acres from the previous season. Total yield for the 2016 crop, at 15,200 pounds per acre, was down 3,000 pounds per acre. The all price for the 2016 crop, at 49.2 cents per pound, was up 7.3 cents per pound from the previous season. Hawaii total value for the 2016 season totaled 9.71 million dollars, down 8 percent from the 2015 season.

During the summer and fall of 2016, the papaya industry, mainly located on the Big Island, suffered numerous excessive rain events, and, at the beginning of 2017, the island experienced extreme drought. These weather events resulted in a reduction in harvested acreage.

Peaches: Utilized peach production for 2016 is estimated at 778,920 tons, down 6 percent from the previous year. The California crop, accounting for 73 percent of the United States utilized peach production, was down 6 percent from 2015.

The California Freestone crop was inconsistent and early varieties ripened around 2 weeks earlier than normal. Hail hurt some orchards and mid-summer varieties suffered from brown rot. Early high temperatures affected sizing. Growers struggled with labor shortages, but overall yield and quality were generally good. The Clingstone crop's full bloom occurred in late February, slightly earlier than the previous year. The crop was mostly reported to be good condition throughout the State. Georgia's peach crop received the necessary chill hours in January and February to deliver an excellent crop. Many producers reported the best crop in several years, despite some reports of crop reduction due to drought, as well as damage from a late freeze and some fungal issues in a few areas.

Beginning in 2016, peach estimates were discontinued in Arkansas, Connecticut, and Massachusetts.

Pears: Utilized pear production for 2016 is estimated at 735,870 tons, down 8 percent from the 2015 estimate. All three estimating States (California, Oregon, and Washington) showed decreased production from the previous year. Bearing acreage, at 46,300, decreased for the thirteenth consecutive year.

In the Pacific Northwest, warm spring weather and good pollination led to a full bloom. The summer was hot and dry with little precipitation and some reported temperatures exceeded the 100 degree mark. Harvest started in the first week of August, which was earlier than normal. In California, the crop was reduced in the Sacramento River District due to reports of severe blight problems. Harvest began in the Sacramento-San Joaquin region the second week of July. Generally fair weather was common for harvest, although there were several very hot days reported.

Beginning in 2016, pear estimates were discontinued in Michigan, New York, and Pennsylvania.

Plums: Total plum production for 2016 is estimated at 135,500 tons, up 28 percent from 2015. Bearing acreage totaled 18,700, up 900 acres from the previous season. Total yield for the 2016 crop was up 22 percent to 7.25 tons per acre. The all price for the 2016 crop, at 813 dollars per ton, was down 19 percent from the previous season. United States total value for the 2016 season totaled 109 million dollars, up 4 percent from the 2015 season.

In California, there were adequate chill hours and a good bloom for the plum crop. The overall reported yield for plums was good in Fresno and Tulare counties despite pockets of rain showers and cooler temperatures potentially reducing bee activity in some areas. There was some hail damage reported in April. The harvest began in mid-May.

Prunes: Total prune production for 2016 is estimated at 54,000 tons, down 52 percent from 2015. Bearing acreage totaled 45,000, down 2,000 acres from the previous season. Total yield for the 2016 crop was down 1.18 tons to 1.20 tons per acre. The all price for the 2016 crop, at 1,600 dollars per ton, was down 22 percent from the previous season. United States total value for the 2016 season, at 86.4 million dollars, was down 62 percent from the 2015 season.

Growers experienced unfavorable weather conditions during the bloom and pollination of the 2016 crop in the main prune growing areas in Northern California. A series of storms with cold, wet, and windy conditions reduced the time that bees could be active as pollinators, significantly reducing crop yields. Numerous growers reported a total crop failure for the season. Consequently, even with more favorable weather through the rest of the season, prune production was the lowest in the last ten years.

Prunes and Plums: Beginning in 2016, prunes and plums estimates were discontinued in Idaho, Michigan, Oregon, and Washington.

Raspberries: Total 2016 United States raspberry production is estimated at 304 million pounds, up 4 percent from 2015. Harvested acreage totaled 21,660, down 260 acres from the previous season. The average yield, at 14,000 pounds per acre, was up 6 percent from the previous year.

California growers reported being discouraged by labor and water restrictions. Oregon's warm weather resulted in average to above average yields, but some growers did report sunburn issues. Washington growers experienced ideal weather conditions which also led to early ripening. The only damage reported was due to wind knocking berries off the plants before they could be harvested.

Strawberries: Utilized production for 2016, at 31.3 million cwt, was up 2 percent from 2015. Four of the six estimating States (California, New York, North Carolina, and Washington) showed increased production from the previous season, while Florida and Oregon showed a decrease.

In California, which made up 92 percent of the production in the United States, growers reported the amount of strawberries grown in the 2016 season surpassed the production from 2015. For 2016, there was an increase in summer plantings for fall production, despite winter rains early in the year in comparison to the two previous years. The production total increased by a switch to higher producing varieties and generally better weather conditions for most of the season. In Florida, wet conditions early in the growing season presented some disease and insect issues. In Oregon, some growers reported heat stress negatively impacted the crop, as well as weed and pest conditions.

Beginning in 2016, strawberry estimates were discontinued in Michigan, Ohio, Pennsylvania, and Wisconsin.

Tree Nuts Comments

Almonds: Utilized almond production, at 1.07 million tons, was up 13 percent from 2015. Bearing acreage for almonds continued to increase, totaling 940,000 in 2016. Yield, at 2,280 pounds per acre, was up 210 pounds from 2015. The 2016 utilized almond crop was valued at 5.16 billion dollars, 12 percent less than the previous year. The price per pound of almonds, at \$2.44, declined 22 percent from 2015.

The 2016 California almond crop bloom began in mid-February, after the winter provided better chill hours than the previous year. Bloom conditions were good; bloom was reportedly fast and uniform. Precipitation for the 2016 crop year

was significantly better than in 2015. Many areas were still experiencing drought conditions, although trees showed signs of recovery from the last few years of insufficient water.

Hazelnuts: The hazelnut crop, at 44,000 tons, was 42 percent above the previous year. Bearing acreage increased 9 percent from 2015 to 37,000. Yield, at 1.19 tons per acre, was up 31 percent from 2015. Hazelnut utilized crop value, at 119 million dollars, was 37 percent above the previous year. Price per ton, at \$2,700, declined 4 percent from 2015.

Historically, hazelnut orchards exhibit alternate bearing patterns and 2016 was an ‘up’ year. Pollination conditions were good in the spring and the weather throughout the growing season was favorable with no rainfall issues. Harvest was complicated by an unusually wet fall that left some of the crop on the orchard floor for longer than normal.

Macadamia Nuts: Macadamia nut production totaled 21,000 tons, down 11 percent from 2015. Bearing acreage remained unchanged at 16,000 while yield decreased 11 percent from the previous year. The 2016 utilized macadamia nut crop was valued at 42.0 million dollars, down 8 percent from 2015. The price per pound of macadamia nuts was 3 cents higher than in 2015.

Growing conditions for macadamia nuts were variable by area for 2016. There were reports of Macadamia Felted Coccid impacting some of the crop. There was a labor shortage for macadamia nuts, while prices remained strong. The 2016 price was a record high.

Pecans: Pecan utilized production in 2016 is estimated at 269 million pounds, up 6 percent from 2015. Improved pecan production, at 250 million pounds, accounted for 93 percent of the total. The value of the 2016 utilized pecan crop increased 24 percent from the previous year to 697 million dollars. Improved pecan production again accounted for the majority of the total, increasing 28 percent from 2015, to 664 million dollars. The price per pound for all pecans, at \$2.59, was \$0.39 higher than 2015.

In Georgia, pecan producers reported an average year. Some were affected by tropical storms but the main pecan growing regions were not directly impacted. In California, regular rains eased drought conditions leading to improved yields.

Beginning in 2016, pecan estimates were discontinued in Arkansas, Florida, Kansas, Mississippi, Missouri, and South Carolina.

Pistachios: Pistachio utilized production, at 448,250 tons was 232 percent higher than 2015. Bearing acreage, at 239,000, continued to increase from previous years. Yield, at 3,750 pounds per acre, was up 223 percent from 2015. The pistachio utilized crop value for 2016, at 1.51 billion dollars, was up 70 percent from the previous year. Price per pound declined 49 percent from 2015 to \$1.68. The majority of the crop, 74 percent, was sold in shell.

The 2016 pistachio production was a record high, surpassing the previous record of 551 million pounds set in 2012. The production reflected a combination of more favorable weather, sufficient winter chilling, good bloom overlap, and normal nut filling. In addition, due to the very poor crop in 2015, the 2016 crop was an “on” year for pistachios. Harvest began in mid to late August. As the crop size grew larger, the crop quality declined due to the wide range of timing in the ripening. With a heavy crop, it is difficult for nuts to mature evenly throughout the tree leading to both early splits and closed shells. The crop ended up having a higher percentage of shelling stock than in a normal year.

Walnuts: Walnut utilized production in 2016, at 686,000 tons, was up 13 percent from the previous year. Bearing acreage for walnuts continued to increase from previous seasons, totaling 315,000 in 2016. Yield, at 2.18 tons per acre, was up 8 percent from 2015. The 2016 utilized walnut crop was valued at 1.24 billion dollars, 23 percent more than the previous year. The majority of the utilized walnut production, 66 percent, was sold shelled. Walnut prices increased 8 percent to \$1,810 per ton in 2016.

The 2016 walnut crop was a record high level of production. The 2016 season began well with adequate chilling hours and a fair amount of winter rains. Weather during bloom was considered average, with some ideal days and some days of stronger winds and wet weather. Hot weather in August resulted in an earlier than usual start to the harvest.

Definition of Terms

Bearing acreage: An orchard, grove, or vineyard is considered to be of bearing age when it can normally be expected to produce a commercially significant quantity of the crop. Bearing age is a function of many factors including variety, rootstock, year planted, etc.

Apple crop: Apple production estimates are published only for commercial orchards, according to the laws governing crop production reports (7 U.S.C 411b). Commercial orchards, under these laws, are defined as orchards of 100 or more bearing trees.

Harvested not sold: Fruit of marketable quality that was picked but not sold for various reasons up to 2 percent of total production is considered normal seasonal loss and is excluded from total production. Reported values are above and beyond these normal seasonal losses. Beginning in 2015, all quantities harvested not sold are included in total production.

Total production: The quantity of a crop actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic or natural reasons are included in production estimates.

Unutilized production: The difference between total and utilized production, which is marketable fruit not harvested for economic or natural reasons and harvested fruit not sold or utilized, is unutilized production. Beginning in 2015, estimates only include harvested not sold.

Unharvested production: Marketable fruit produced, but not harvested for various reasons, is unharvested production. Unharvested amounts up to 2 percent of total production are considered normal seasonal losses and are excluded from total production. Published estimates of unharvested production represent quantities above and beyond these normal seasonal losses. Beginning in 2015, estimates were discontinued.

Utilization: These estimates refer to the first utilization, not necessarily the final utilization of a crop. For example, frozen fruit includes some fruit that may be later used for making preserves. Grade-outs for fresh market fruit which are processed are included in the processing quantity. Fruit graded-out from canning or freezing and utilized for juice is included with juice.

Utilized production: The amount of a crop sold plus the quantities used at home or held in storage represents utilized production.

Yield per acre: Unless otherwise stated, yield per acre is based on total production.

Price and Value Definitions

Price: Except where specified as monthly, prices in this report represent the Market Year Average (MYA) price. For a crop sold for both fresh market and processing, the total crop MYA is a weighted average of the fresh and processing prices.

Prices for fresh fruit represent the average price producers receive at the point of first sale. This is commonly referred to as the average price as sold. The exception is fresh fruit sales in California, Michigan (apples only), New York (apples only), and Washington which are equivalent returns at packinghouse door.

Prices for fruit sold for processing are equivalent returns for fruit delivered to the processing plant door except for cranberries, California olives, and freestone peaches, which are priced at the first delivery point.

Value: Crop value estimates in this report cover the marketing season or crop year and should not be confused with cash receipts which are based on a calendar year.

State MYA Price and Value Computations

Fresh Market Value:

Fresh Market MYA * Fresh Market Utilization

Processed Value:

Processed MYA * Processed Utilization

"All" Value:

Fresh Market Value + Processed Value

"All" MYA:

"All" Value / "All" Utilization

For commodities with components not identified by market channel, substitute breakdown name for fresh market/processed and use the same procedure.

United States MYA Price and Value Computations

Fresh Market MYA:

$$\frac{\sum(\text{Fresh Market Value For All States})}{\sum(\text{Fresh Market Utilization For All States})}$$

Processed MYA:

$$\frac{\sum(\text{Processed Value For All States})}{\sum(\text{Processed Utilization For All States})}$$

"All" MYA:

$$\frac{\sum(\text{Value For All States})}{\sum(\text{Utilization For All States})}$$

Noncitrus Fruits Marketing Seasons

Apples: July to May for Illinois, Indiana, Michigan and Ohio; August to December for Arizona, Iowa, Minnesota, Missouri, New Jersey, Tennessee and Wisconsin; August to June for all other states.

Apricots: May 15 to July 5 for California; June 10 to August 15 for Utah; June 20 to August 1 for Washington.

Avocados: November 1 to October for California; June 20 to March 1 for Florida; January 1 to December 31 for Hawaii.

Bananas: January 1 to December 31

Blackberries: June to October

Blueberries, Cultivated: March to October

Blueberries, Wild: July to September

Boysenberries: July to August

Cherries, sweet: April 25 to June 15 for California; July 20 to August 20 for Montana; June to July for all other States.

Cherries, tart: June 25 to August 15

Cranberries: September to January

Dates: August 15 to March 15

Figs: June 5 to October 30

Grapes: May 25 to July for Table (California); June 5 to July 31 for Raisin (California); August 15 to December 15 for Wine (California and Washington); September 15 to November 1 for Juice (Washington); July to October for all other States.

Guavas: January 1 to December 31

Kiwifruit: October 1 to May 31

Nectarines: April 30 to October 15

Olives: August 1 to July 31

Papayas: January 1 to December 31

Peaches: July 10 to September 15 for Clingstone (California); April 20 to October 10 for Freestone (California); May to August for Georgia and South Carolina; July to September for all other States.

Pears: July to December for Bartlett (California, Oregon, and Washington); July to June for other (California, Oregon, and Washington).

Plums: May 15 to October 20 for California

Prunes, dried: August 20 to April 15 for California

Prunes and plums: August 15 to October 15

Raspberries: May through November

Strawberries: September 15 to December 31 for California; December 15 to May 15 for Florida; April 10 to June 15 for North Carolina; May 30 to July 15 for Pennsylvania and Wisconsin; June to July for all other States.

Tree Nuts Marketing Seasons

Almonds: August 5 to November 15

Hazelnuts: October 1 to November 30

Macadamia nuts: July 1 to June 30

Pecans: October 1 to March 31

Pistachios: September 30 to January 30

Walnuts: September 15 to November 10

For detail by States, see Agricultural Handbook No. 729, *Fruits and Tree Nuts: Blooming, Harvesting, and Marketing Dates*, December 2006.

Statistical Methodology

Survey Procedures: Non-probability monthly grower surveys are used to collect crop condition, yield, acreage, and production data. These fruit inquiries are generally mailed surveys during the growing season. Telephone follow-up of mail survey non-respondents is used to ensure adequate coverage. Special grower disposition surveys are conducted at the end of each season to provide additional details about the crop. They provide indications of the quantity used on farms, the quantity sold directly to consumers, unharvested production, and production not sold or utilized. All fruit and nut processors or shellers are also surveyed annually to determine quantity handle, utilization, and the origin of the commodity.

Estimating Procedures: Information obtained from the non-citrus fruits and nuts grower surveys along with federal administrative data is used to establish estimates of bearing acres, yield, total production, utilized production, price, and value. These estimates are reviewed for errors, reasonableness, and consistency with historical estimates.

Revision Policy: Final survey indications and check data for most non-citrus fruits and nuts are available prior to submitting utilization estimates. As a result revisions are allowed for a few crops in the spring. End-of-season estimates of production are made following harvest and are subject to revision the following year based on a thorough review of all available data.

Reliability: Survey indications are subject to sampling variability because all operations growing non-citrus fruits and/or nuts are not included in the sample. Survey results are also subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. These errors cannot be measured directly, but are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

Information Contacts

Listed below are the commodity statisticians in the Crops Branch of the National Agricultural Statistics Service to contact for additional information. E-mail inquiries may be sent to nass@nass.usda.gov

Lance Honig, Chief, Crops Branch	(202) 720-2127
Jorge Garcia-Pratts, Head, Fruits, Vegetables and Special Crops Section.....	(202) 720-2127
Vincent Davis – Bananas, Cherries, Garlic, Lettuce, Mint, Papaya, Pears, Strawberries, Taro, Tomatoes	(202) 720-2157
Fleming Gibson – Avocados, Cauliflower, Celery, Citrus, Coffee, Dates, Figs, Kiwifruit, Nectarines, Olives, Watermelons	(202) 720-5412
Greg Lemmons – Blackberries, Blueberries, Boysenberries, Cranberries, Cucumbers, Potatoes, Raspberries, Squash, Sugarbeets, Sugarcane, Sweet Potatoes	(202) 720-4285
Dan Norris – Artichokes, Austrian Winter Peas, Cantaloupes, Dry Beans, Dry Edible Peas, Honeydews, Lentils, Mushrooms, Peaches, Snap Beans	(202) 720-3250
Daphne Schaubert – Bell Peppers, Broccoli, Cabbage, Chile Peppers, Floriculture, Grapes, Hops, Maple Syrup, Tree Nuts, Spinach	(202) 720-4215
Chris Singh – Apples, Apricots, Asparagus, Carrots, Lima Beans, Onions, Plums, Prunes, Sweet Corn, Tobacco	(202) 720-4288

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site: www.nass.usda.gov
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit www.nass.usda.gov and click on “National” or “State” in upper right corner above “search” box to create an account and select the reports you would like to receive.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@nass.usda.gov.

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the basis of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

If you wish to file a Civil Rights program complaint of discrimination, complete the [USDA Program Discrimination Complaint Form](#) (PDF), found online at http://www.ascr.usda.gov/complaint_filing_cust.html, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at program.intake@usda.gov.
